**Database Design and ER Model:** ER Model, Extended E-R Features, converting ER model and EER model to tables, schema diagrams.

**Relational Database Design:** Functional Dependency, Normalization 1NF, 2NF and 3NF **Topic for Self-Study :** BCNF.

Unit IV NO SQL Database

**Database-system Architecture:** Centralized and Client-Server Architecture, Server System Architecture, Introduction to Parallel and Distributed databases.

**NoSQL Databases:** Structured, Unstructured Data and Semi-Structured Data, Comparison of RDBMS and NoSQL, CAP theorem and BASE property.

(08 hrs)

**CO4** 

Types of NoSQL Databases: Key-value store, document store, graph, wide column stores.

Mongo DB: Data types, CRUD operations, Aggregation, Indexing, Sharding.

| Unit V | Transaction Management | (06 hrs) | CO5 |
|--------|------------------------|----------|-----|
|        |                        | (** *)   |     |

**Transaction:** Transaction concept, Transaction state, Transaction Property, Concurrent Executions **Serializability:** Conflict serializability, View Serializability, Testing for Serializability, Deadlock prevention, Deadlock Detection and Recovery from deadlock.

**Concurrency Control Protocols:** Two phase Locking, Timestamp-based protocol.

**Recovery:** Failure classification, Shadow-Paging and Log-Based Recovery

|   | Г   | 1        |
|---|---|----------|
|   | 5. Find all employees in the database who live in the same cities and on the            |          |
|   | same streets as do their managers.  |          |
|   | 6. Find all employees in the database who do not work for First Bank                    |          |
|   | Corporation.  |          |
|   | 7. Find all employees in the database who earn more than each employee                  |          |
|   | of Small Bank Corporation.  |          |
|   | 8. Assume that the companies may be located in several cities. Find all                 |          |
|   | companies located in every city in which Small Bank Corporation is                      |          |
|   | located.  |          |
|   | 9. Find all employees who earn more than the average salary of all                      |          |
|   | employees of their company.   |          |
|   | 10. Find the company that has the most employees.                                       |          |
|   | 11. Find the company that has the smallest payroll.                                     |          |
|   | 12. Find those companies whose employees earn a higher salary, on                       |          |
|   | average, than the average salary at First Bank Corporation.                             |          |
|   | Index, Sequence and View  | CO1, CO2 |
|   | Consider the given relational table:  |          |
|   | employee(empno, empname, designation, city, salary, zipcode, county)                    |          |
|   | Write SQL queries for the following   |          |
|   | 1. Create a sequence used to generate employee numbers for                              |          |
|   | the empno column of the emp table.  |          |
| 2 | 2. Create an Index on the county.   |          |
| 2 | 3. Find the country whose zipcode = $071$ and check whether the query uses              |          |
|   | the Index and write your observation.   |          |
|   | 4. Create a view for employees having salary < 50000 and stays in                       |          |
|   | 'Mumbai'  |          |
|   | 5. Display a Count of employees who stays in 'Mumbai'                                   |          |
|   | 6. Find average salary of employees of a created view                                   |          |
|   | 7. Display employee names who stays on same street of a view                            |          |
|   | SQL Joins   | CO1, CO2 |
|   | Consider the given database schema:   |          |
|   | Student (studentid, studentname, instructorid, studentcity)                             |          |
|   | Instructor(instructorid,Instructorname,instructorcity,specialization)                   |          |
|   | Use all types of Joins  |          |
| 3 | 1. Find the instructor of each student.   |          |
| 5 | 2. Find the student who is not having any instructor.                                   |          |
|   | 3. Find the student who is not having any instructor as well as instructor              |          |
|   | who is not having student.  |          |
|   | 4. Find the students whose instructor's specialization is computer.                     |          |
|   | 5. Create a view containing the total number of students whose instructor               |          |
|   | belongs to "Pune".  |          |
|   | ER Modelling and Normalization:   | CO3      |
|   | Conceptual Design using ER features using tools like ERD plus, ER Win etc.              |          |
| 4 | (Identifying entities, relationships between entities, attributes, keys, cardinalities, |          |
|   | generalization, specialization etc.) Convert the ER diagram into relational tables      |          |
|   | and normalize the Relational data model.  | 001 002  |
|   | PL/SQL block  | CO1, CO2 |
| E | Create a database with following schemas  |          |
| 5 | Borrower(Rollin, Name, DateofIssue, NameofBook, Status) &                               |          |
|   | Fine(Roll_no,Date,Amt)  |          |
|   | 1. Write a PL/SQL block to accept input for Borrower table.                             |          |

|   | 2 Write a DI /SOI block using control structures to calculate fine burging   |          |
|---|--|----------|
|   | 2. Write a PL/SQL block using control structures to calculate fine by using  |          |
|   | the following rules:   |          |
|   | a. check the number of days (from date of issue), if days are  |          |
|   | between 15 to 30 then fine   |          |
|   | amount will be Rs 5 per day  |          |
|   | b. If no. of days>30, per day fine will be Rs 50 per day   |          |
|   | c. for days less than 30, Rs. 5 per day.   |          |
|   | After submitting the book, status will change from I to R. If condition of   |          |
|   | fine is true, then details   |          |
|   | will be stored into fine table.  |          |
|   | Cursors  | CO1, CO2 |
|   | Write a block in PL/SQL to print a report which shows that, the employee   |          |
| 6 | id, name, hire date, and the incentive amount they achieved according to   |          |
|   | their working experiences, who joined in the month of current date. Use  |          |
|   | explicit cursor  |          |
|   | Database Trigger   | CO1, CO2 |
|   | Create a Library database with the schema  | ,        |
|   | Books(AccNo, Title, Author, Publisher, Count).   |          |
|   | a. Create a table Library_Audit with same fields as of Books and Date and  |          |
|   | status column  |          |
| 7 |  |          |
|   | b. Create a before trigger to insert records into Librry_Audit table   |          |
|   | if there is deletion in Books table, insert date of deletion and status as   |          |
|   | deleted  |          |
|   | Create a after trigger to insert records into Librry_Audit table if there is   |          |
|   | updation in Books table, insert date of updation and status as updated   |          |
|   | Database Connectivity:   | CO5      |
| 0 | Write a program to implement Menu driven   |          |
| 8 | MySQL/Oracle database connectivity with any front end language for   |          |
|   | Python/Java/PHP to implement Database navigation operations (add, delete, edit   |          |
|   | etc.)  |          |
|   |  |          |

### **Guidelines for Laboratory Conduction**

Use of coding standards and Hungarian notation, proper indentation and comments.

Use of open source software is to be encouraged.

Operating System recommended: - Linux or its derivative

Programming tools recommended: - Open Source line gcc/g++

Programming Language :- C++/Java/Python

### Guidelines for Student's Lab Journal

The laboratory assignments are to be submitted by students in the form of a journal. Journal consists of Certificate, table of contents, and handwritten write-up of each assignment (Title, problem statement, theory concepts in brief, algorithm, flowchart, test cases and conclusions). Program codes with sample outputs shall be submitted in soft form.

### **Guidelines for Termwork Assessment**

Continuous assessment of laboratory work shall be based on overall performance of a student. Assessment of each laboratory assignment shall be based on rubrics that include R1- Timely completion (10), R2- Understanding of assignment (10) and R3- Presentation/clarity of journal writing (10) (Coding standard, Indentation, Hungarian notation, input validation etc)

| Unit IV Software Testing Life Cycle and Test Cases | ( <b>08hrs</b> ) | CO4 |  |
|--|------------------|-----|--|
|--|------------------|-----|--|

**Software Testing Life Cycle:** Requirements Analysis/Design, Traceability Matrix, Test Planning, Objective, Scope of Testing, Schedule, Approach, Roles & Responsibilities, Assumptions, Risks & Mitigations, Entry & Exit Criteria, Test Automation, Deliverables

**Test Cases Design:** Write Test cases, Review Test cases, Test Cases Template, Types of Test Cases, Difference between Test Scenarios and Test Cases. Test Environment setup; Understand the SRS, Hardware and software requirements, Test Data.

**Test Execution:** Execute test cases, Error/Defect Detecting and Defect Life Cycle, Types of Bugs, Art of Debugging, Debugging Approaches, Reporting the Bugs, Severity and priority, Test Closure, Criteria for test closure, Test summary report.

|   |        |                                 | (06hrs) | C05 |
|---|--------|---------------------------------|---------|-----|
|   | Unit V | Quality and Process Improvement |         |     |
| I |        |                                 |         |     |

**Define What** Is Quality, Application of Concept of Quality to Software Application, Quality Assurance, Quality Control, Testers Contribution To Quality of Software Application,

**Software Testing Metrics:** Test Measurements, Test Metrics, Metric Life Cycle, Types of Manual Test Metrics. TQM, Four Principles of TQM.

Quality Standards: CMMI (Capability Maturity Model Integration), ISO, IEEE, Six Sigma, Motorola.

| CO1   | Make use of AR and VR  | development tools   |  | 2- Understand    |  |  |  |  |
| CO2   | Demonstrate the use of A   | R,VR and MR devices   |  | 3- Apply         |  |  |  |  |
| CO3   | Design and develop a gam   | ne scene  |  | 6- create        |  |  |  |  |
| CO4   | Build AR and (or) VR ap  | plication   |  | 6- create        |  |  |  |  |

|            | List of Laboratory Experiments / Assignments   |              |  |  |  |  |  |
|------------|--|--------------|--|--|--|--|--|
| Sr.<br>No. | Laboratory Experiments / Assignments   | CO<br>Mapped |  |  |  |  |  |
| 1.         | Study of various AR & VR Development tools such as UNITY 3D IDE and its documentation.   | CO1          |  |  |  |  |  |
| 2.         | Create a C# script that plays a video when an image is scanned using AR App (AR Core & Unity).   | CO3          |  |  |  |  |  |
| 3.         | Develop & Deploy a simple marker-based AR app in which you have to write a C# program to play video on tracking a particular marker.   | CO3,CO4      |  |  |  |  |  |
| 4.         | <ul> <li>Design and Develop the following using Vuforia Engine developer portal: <ol> <li>Plane detection</li> <li>Marker based Tracking (Create database of objects to be tracked in Vuforia)</li> </ol> </li> <li>III. Object Tracking and deploy it on AR devices.</li> </ul> | CO3, CO4     |  |  |  |  |  |
| 5.         | Demonstration of the working of HTC Vive, Oculus Quest 2, Microsoft Hololens2.   | CO2          |  |  |  |  |  |
| 6.         | Develop a scene in Unity that includes:<br>I. A cube, plane and sphere, apply transformations on the 3 game  | CO4          |  |  |  |  |  |

|          | objects.  |                                       |
|----------|---|---------------------------------------|
|          | II. Add a video and audio source.   |                                       |
| 7.       | Develop a scene in Unity that includes a cube, plane and sphere. Create a new material and texture separately for three Game objects. Change the color, material and texture of each Game object separately in the scene. Write a C# program in visual studio to change the color and Material/texture of the game objects dynamically on button click.   |                                       |
| 8.       | Develop and deploy a VR app, Add interactive elements to the environment, such as objects that can be picked up, manipulated, or triggered by the user's actions.   | CO4                                   |
| 9.       | <ul> <li>A. Create a multiplayer VR game (battlefield game). The game should keep track of score, no. of chances/lives, levels (created using different scenes), involve interaction, animation and immersive environment.</li> <li>OR</li> <li>B. Create a treasure hunt AR application which should have the following features: <ul> <li>A help button for instruction box to appear</li> <li>A series of markers which would give hints on being scanned</li> <li>Involve interaction, sound, and good UI OR</li> </ul> </li> </ul> |                                       |
|          | C. Evaluate an existing VR application or a VR game.  |                                       |
|          | Guidelines for Laboratory Conduction  |                                       |
| Use of   | coding standards and Hungarian notation, proper indentation and comments.   |                                       |
|          | open source software is to be encouraged.   |                                       |
|          | e using AR & VR tools such Unity, Vuforia, Blender, Unreal.   |                                       |
|          | ng System recommended: - Linux or its derivative, Windows 10 and above  |                                       |
| -        | nming tools recommended: - Open Source line $gc/g++/C#$   |                                       |
| Tiogram  | Guidelines for Student's Lab Journal  |                                       |
| The lab  | oratory assignments are to be submitted by students in the form of a journal. Jour  | nal consists of                       |
|          | ate, table of contents, and handwritten write-up of each assignment (Title, problem sta   |                                       |
|          | s in brief, algorithm, flowchart, test cases and conclusions). Program codes with s   | -                                     |
|          | submitted in soft form  | I I I I I I I I I I I I I I I I I I I |
|          | Guidelines for Term-work Assessment   |                                       |
| Continuc | bus assessment of laboratory work shall be based on overall performance of a studer   | nt. Assessment                        |
|          | laboratory assignment shall be based on rubrics that include R1- timely comple  |                                       |
|          | nding of assignment (10) and R3- presentation/clarity of journal writing (10) (Co   |                                       |

 Tools: Selenium, Jira
 Test automation – script creation and execution

# **Guidelines for Laboratory Conduction**

Use of coding standards and Hungarian notation, proper indentation and comments. Use of open source software is to be encouraged.

Operating System recommended: - Linux or its derivative

#### Guidelines for Student's Lab Journal

The laboratory assignments are to be submitted by students in the form of a journal. Journal consists of Certificate, table of contents, and handwritten write-up of each assignment (Title, problem statement, theory concepts in brief, algorithm, flowchart, test cases and conclusions). Program codes with sample outputs shall be submitted in soft form

## **Guidelines for Laboratory Conduction**

**Selection of Project/Problem:** The problem-based project oriented model for learning is recommended. The model begins with the identifying of a problem, often growing out of a question or "wondering". This formulated problem then stands as the starting point for learning. Students design and analyze the problem within an articulated interdisciplinary or subject frame. A problem can be theoretical, practical, social, technical, symbolic, cultural and/or scientific and grows out of students' wondering within different disciplines and professional environments. A chosen problem has to be exemplary. The problem may involve an interdisciplinary approach in both the analysis and solving phases. By exemplarity, a problem needs to refer back to a particular practical, scientific, social and/or technical domain. The problem should stand as one specific example or manifestation of more general learning outcomes related to knowledge and/or modes of inquiry. There are no commonly shared criteria for what constitutes an acceptable project. Projects vary greatly in the depth of the questions explored, the clarity of the learning goals, the content and structure of the activity.

• A few hands-on activities that may or may not be multidisciplinary

• Use of technology in meaningful ways to help them investigate, collaborate, analyze, synthesize and present their learning.

• Activities may include- Solving real life problem, investigation /study and Writing reports of in depth study, field work.

Working in supervisor/mentor monitored groups; the students plan, manage, and complete a task/project/activity which addresses the stated problem.

1. There should be team/group of 4-5 students

2. A supervisor/mentor teacher assigned to individual groups

**Guidelines for Student's Lab Journal** 

The laboratory work are to be submitted by students in the form of detailed documentation which may include requirements, design and modelling, implementation/execution, use of technology and other documents

#### **Guidelines for Term work Assessment**

#### Assessment:

Progress of PBL is monitored regularly on weekly basis. Weekly review of the work is necessary. During process of monitoring and continuous assessment and evaluation of the individual and the team performance is to be measured.

Group may demonstrate their knowledge and skills by developing a public product and/or report and/or presentation.

1. Individual assessment for each student (Understanding individual capacity, role and involvement in the project)

2. Group assessment (roles defined, distribution of work, intra-team communication and togetherness)

3. Documentation and presentation

## **Recommended parameters for assessment/evaluation and weightage:**

1. Idea Inception and Awareness /Consideration of -Environment/ Social /Ethics/ Safety Measures /Legal aspects (15%)

2. Outcomes of PBL/ Problem Solving Skills/ Solution provided/ Final product (Individual

Assessment and team assessment) (50%)

3. Documentation (Gathering requirements, design and modelling, implementation/execution, use of technology and final report, other documents) (15%)

4. Demonstration (Presentation, User Interface, Usability) (20%)

**UX Basics**- Foundation of UX design, Good and poor design, Understanding Your Users, Designing the Experience Elements of user Experience, Visual Design Principles, Functional Layout, Interaction design, Introduction to the Interface, Navigation Design, User Testing, Developing and Releasing Your Design **User experience and user interaction**-Usability of interactive systems, goals and measures, Universal Usability, Characteristics of graphical and web user interfaces, guidelines, principles and theories of good design

User Experience- Concept of UX, Trends in UX, 6 Stages used to UX design, Applications of UX design

Unit III Design Process

(07 hrs) CO3

Managing design processes, organizational design to support usability, pillars of design, development methodologies, Human considerations in Design

**Usability-** principles to support usability, assessment in the design process, Usability problems, practical measures of usability, objective measures of usability, golden rules of interface design

**Evaluating Interface Design**– Introduction, Expert reviews, Usability testing, Acceptance tests, Legal issues

| Unit IV | Interaction Styles and controls | (07 hrs)   | CO4 |
|---------|---------------------------------|------------|-----|
|         | interaction Styles and controls | (07 111 5) | 004 |

## Interaction Styles-

Direct manipulation and virtual environment, Develop system menus and navigation schemes-Structure of menus, Function of menus, content of menus, phrasing the menu, navigating menus, kinds of graphical menus, form fill-in and dialog boxes, command- organization, functionality, strategies and structure, naming and abbreviations, interaction devices, collaboration and social media participation.

# Implementation support and Screen Based Controls

| Unit V | Usability Evaluation and Design Issues | (07 hrs) | CO5       |
|--------|--|----------|-----------|
|        |  | 1        | •1•7 • 7• |

**Quality of service-** Models of response time impacts, user productivity, variability in response time, Balancing function and fashion- Error messages, display design, web page design, window design, color, **Information visualization**– data type by task taxonomy, challenges for information visualization, societal and individual impact of user interface

# Usability Evaluation Methods-

Usability Testing ,Heuristic evaluations , Cognitive walkthrough, Surveys and Questionnaires Eye Tracking, A/B Testing, Remote Usability Testing, Think-Aloud Protocol, Comparative Usability Evaluation Industry Trends and Case Studies, Professional practices and career opportunities in UI/UX design

Prerequisite Course: -

# Companion Courses: - Program Elective Course II, Program Elective Course III

## **Course Objectives:**

- To study the fundamentals in selected elective subject.
- To design and develop a system / application
- To study modern tools, technologies, and techniques.

#### **Course Outcomes**

On completion of the course, students will be able to-

|       | COM223015C: High Performance Comput   | ting            |
| 1     | Analyze performance of sequential and parallel algorithms.                                | 3-Apply         |
| 2     | Design and implement solutions for<br>multicore/Distributed/parallel environments.        | 3-Apply         |

#### **Guidelines for Instructor's Manual**

The instructor's manual is to be developed as a reference and hands-on resource. It should include prologue (about university/program/ institute/ department/foreword/ preface), curriculum of the course, conduction and Assessment guidelines, topics under consideration, concept, objectives, outcomes, set of typical applications/assignments/ guidelines, and references.

# **Guidelines for Student's Laboratory Journal**

The laboratory assignments are to be submitted by student in the form of journal. Journal consists of Certificate, table of contents, and handwritten write-up of each assignment (Title, Date of Completion, Objectives, Problem Statement, Software and Hardware requirements, Assessment grade/marks and assessor's sign, Theory- Concept in brief, algorithm, flowchart, test cases, Test Data Set (if applicable), mathematical model (if applicable), conclusion/analysis. Program codes with sample output of all performed assignments are to be submitted as softcopy. As a conscious effort and little contribution towards Green IT and environment awareness, attaching printed papers as part of write-ups and Program listing to journal must be avoided. Use of DVD containing student's programs maintained by Laboratory In-charge is highly encouraged. For reference one or two journals may be maintained with program prints in the Laboratory.

# **Guidelines for Laboratory /Term Work Assessment**

Continuous assessment of laboratory work should be based on overall performance of Laboratory assignments by a student. Each Laboratory assignment assessment will assign grade/marks based on parameters, such as timely completion, performance, innovation, efficient codes and punctuality.

## **Guidelines for Oral Examination**

Problem statements must be decided jointly by the internal examiner and external examiner. During practical assessment, maximum weightage should be given to satisfactory implementation of the problem statement. Relevant questions may be asked at the time of evaluation to test the student 's understanding of the fundamentals, effective and efficient implementation. This will encourage, transparent evaluation and fair approach, and hence will not create any uncertainty or doubt in the minds of the students. So, adhering to these principles will consummate our team efforts to the promising start of student's academics.

## **Guidelines for Laboratory Conduction**

The instructor is expected to frame the assignments by understanding the prerequisites, technological aspects, utility and recent trends related to the topic. The assignments are based on chosen Program Elective Course II and Program Elective Course III. The assignment framing policy need to address the average students and inclusive of an element to attract and promote the intelligent students. Use of open-source software is encouraged. Based on the concepts learned. Instructor may also set one assignment or mini-project that is suitable to respective branch beyond the scope of syllabus.

| Sr. | All assignments are compulsory  | COs      |

| Sr. No. | List of Laboratory Assignments/ Experiments  | COs Mapped  |
|---------|--|-------------|
| 1       | Installation of Android studio.  | CO1         |
| 2       | Create an application that can print a message "Welcome to Android ".  | CO1         |
| 3       | Create an application that takes the name from a text box and shows hello<br>message along with the name entered in text box, when the user clicks the<br>OK button.   | CO3         |
| 4       | Create a screen that has input boxes for user name, password, address,<br>Gender (radio buttons for male and female), Age (numeric), Date of Birth<br>(Date Picket), State (Spinner) and a Submit button. On clicking the submit<br>button, print all the data below the Submit Button (use any layout). | CO3         |
| 5       | Design an android application to create page using Intent and one Button and pass the Values from one Activity to second Activity.   | CO3         |
| 6       | Design an Android application Send SMS using Intent.   | CO3         |
| 7       | Create an Android application using Fragments.   | CO2         |
| 8       | Design an Android application Using Radio buttons.   | CO3         |
| 9       | Design an Android application for menu.  | CO3         |
| 10      | Create a user registration application that stores the user details in a database table.   | CO4         |
| 11      | Develop a Mobile application for simple needs (Mini Project).  | CO2,CO3,CO4 |

#### **Guidelines for Laboratory Conduction**

Use of coding standards and Hungarian notation, proper indentation and comments.

Use of open source software is to be encouraged. Operating System recommended: Linux or its derivative. Programming tools recommended: Eclipse, Android Studio.

#### **Guidelines for Student's Lab Journal**

The laboratory assignments are to be submitted by students in the form of a journal. Journal consists of Certificate, table of contents, and handwritten write-up of each assignment (Title, problem statement, theory concepts in brief, algorithm, flowchart, test cases and conclusions). Program codes with sample outputs shall be submitted in soft form.

## **Guidelines for Term work Assessment**

Continuous assessment of laboratory work shall be based on overall performance of a student. Assessment of each laboratory assignment shall be based on rubrics that include

R1- timely completion (10),

R2- understanding of assignment (10) and

R3- presentation/clarity of journal writing (10).

### **Guidelines for Termwork Assessment**

Panel of staff members along with a guide would be assessing the seminar work based on these Parameters-Topic, Contents and Presentation, regularity, Punctuality and Timely Completion, Question and Answers, Report, Paper presentation/Publication, Attendance and Active Participation. Sample evaluation sheet format given below:

### **Table 1 : Seminar Evaluation Sheet**

| Roll.<br>No. | Name of<br>Student | Contents<br>and<br>Quality of<br>Presentation<br>(Table 2) | Punctuality and Timely<br>Completion<br>(following of deadline) | Seminar<br>Report | Question<br>and<br>Answers | Total |

|         | List of Laboratory Experiments / Assignments  |           |  |  |  |  |
|---------|---|-----------|--|--|--|--|
| Sr. No. | Laboratory Experiments / Assignments  | CO Mapped |  |  |  |  |
| 1       | CP/IP Packet Analysis: In this assignment, students capture network traffic using tools like Wireshark and analyze TCP/IP packets to understand the protocols and their interactions.                 | CO1       |  |  |  |  |
| 2       | Routing Algorithm Simulation: Using network simulation tools like NS-3 or Cisco Packet Tracer, students implement and compare various routing algorithms such as Dijkstra's algorithm, OSPF, and BGP. | CO2,CO4   |  |  |  |  |
| 3       | Socket Programming: Students write client-server programs using socket programming in languages like Python or Java to implement basic network protocols like HTTP, FTP, or SMTP                      | CO1       |  |  |  |  |
| 4       | Write a program for error detection and correction for 7/8 bits ASCII codes using Hamming Codes or CRC.   | CO2       |  |  |  |  |
| 5       | Write a program to simulate Go back N and Selective Repeat Modes of Sliding Window Protocol in Peer-to-Peer mode.   | CO2       |  |  |  |  |
| 6       | Write a program to demonstrate Sub-netting and find subnet masks  | CO3       |  |  |  |  |

| 7             | Write a program to implement link state /Distance vector routing protocol     | CO3             |
|---------------|---|-----------------|
| /             | to find suitable path for transmission  |                 |
|               | Write a program using TCP socket for wired network for following              | CO1,CO4         |
| 8             | a. Say Hello to Each other  |                 |
| 0             | b. File transfer  |                 |
|               | c. Calculator   |                 |
| 9             | Write a program using UDP Sockets to enable file transfer (Script, Text,      | CO1,CO4         |
| )             | Audio and Video one file each) between two machines.                          |                 |
| 10            | Write a program for DNS lookup. Given an IP address as input, it should       | CO4             |
| 10            | return URL and vice-versa.  |                 |
| Programmir    | ng Problems   |                 |
|               | To study the SSL protocol by capturing the packets using Wireshark tool       | CO3             |
| 1             | while visiting any SSL secured website (banking, e-commerce etc.).            |                 |
|               |   |                 |
| 2             | Illustrate the steps for implementation of S/MIME email security, POP3        | CO4             |
| 2             | through Microsoft Office Outlook.   |                 |
|               | Guidelines for Laboratory Conduction  |                 |
| Use of codi   | ng standards and Hungarian notation, proper indentation and comments.         |                 |
| Use of open   | n source software is to be encouraged.  |                 |
| Operating S   | System recommended: - Linux or its derivative                                 |                 |

Codd's Rules, Introduction to Schema Refinement, Functional Dependencies - Reasoning about FDs, Properties of Decompositions, Armstrong's Axioms

**Normalization**: Normal forms based on Primary Keys, Second and Third Normal Forms, BoyceCodd Normal Form, Multi valued Dependencies and Fourth Normal Form, Schema Refinement in Database Design, Other Kinds of Dependencies.

**Relational Database Design**: Dependency Preservation, Lossless design, Comparison of Oracle & DB2 or MySQL

Unit IV Transaction Management

(**09 hrs**)

**Transaction:** Transaction concept, Transaction state, Transaction Property, Concurrent Executions **Serializability:** Conflict serializability, View Serializability, Testing for Serializability, Deadlock prevention, Deadlock Detection and Recovery from deadlock.

**Concurrency Control Protocols:** Two phase Locking, Timestamp-based protocol.

**Recovery:** Failure classification, Shadow-Paging and Log-Based Recovery

| Unit V | <b>Storage and Indexing</b> |
|--------|-----------------------------|
|--------|-----------------------------|

e and Indexing (09 hrs) CO5

**Overview of Storage and Indexing**: Data on External Storage, File Organization and Indexing, Index Data Structures, Comparison of File Organizations.

**Tree-Structured Indexing**: Intuition for tree Indexes, Indexed Sequential Access Method (ISAM), **B**+ **Trees**: A Dynamic Index Structure, Search, Insert, Delete.

HashBased Indexing: Static Hashing, Extendible hashing, Linear Hashing, Extendable vs. Linear Hashing.

Backup and recovery strategies: full backups, differential backups, and transaction log backups

| 5 Wholesale Dealer Consider the following relation that keeps track of the sales of a wholesale dealer in trousers:   | 4 | <b>ER Modelling and Normalization:</b><br>Conceptual Design using ER features using tools like ERD plus, ER Win etc. (Identifying entities, relationships between entities, attributes, keys, cardinalities, generalization, specialization etc.) Convert the ER diagram   | CO3      |
|   | 5 | Wholesale Dealer Consider the following relation that keeps track of the   | CO1      |

|    | numberSold, price)<br>Suppose the following functional dependencies hold on the relation:   |          |  |  |  |
|----|---|----------|--|--|--|
|    | customerID -> customerName  |          |  |  |  |
|    | customerID, model, size, day -> numberSold model,   |          |  |  |  |
|    | size -> price model,  |          |  |  |  |
|    | price -> size   |          |  |  |  |
|    | a. Decompose the relation in smaller relations such that – each of the smaller relations is in BNCF with respect to the projection of the original dependencies; – the decomposition is a loss less join decomposition. |          |  |  |  |
|    | b. Is your decomposition dependency preserving? If your answer is "yes", argue why. If your answer is "no", show which dependencies have been lost.   |          |  |  |  |
|    | PL/SQL block  | CO1, CO2 |  |  |  |
|    | Create a database with following schemas  |          |  |  |  |
|    | Employee(Id, Name, mobile, address, salary) &   |          |  |  |  |
|    | Sales(Id, Month, Amount)  |          |  |  |  |
| 6  | Write a PL/SQL block to accept employee id and calculate the bonus  |          |  |  |  |
|    | according to sale amount<br>if sale amount < 50000 then no bonus  |          |  |  |  |
|    | if sale amount between 50000 to 150000 then bonus is 5%   |          |  |  |  |
|    | If sale amount >150000 bonus is 10%   |          |  |  |  |
|    | Display the final salary of the employee (salary + bonus)   |          |  |  |  |
|    | Cursors   | CO1, CO2 |  |  |  |
|    | Write a block in PL/SQL to modify the accounts table according to   |          |  |  |  |
| 7  | instructions stored in the action table. Each row in the action table contains  |          |  |  |  |
|    | an account number, an action to be taken (I, U, or D for insert, update, or<br>delete) an amount by which to update the account, and a time tag used to   |          |  |  |  |
|    | delete), an amount by which to update the account, and a time tag used to sequence the transactions. Use explicit cursor  |          |  |  |  |
|    | Database Trigger  | CO1, CO2 |  |  |  |
|    | Create a Library database with the schema   | 001,002  |  |  |  |
|    | Books(AccNo, Title, Author, Publisher, Count).  |          |  |  |  |
|    | a. Create a table Library_Audit with same fields as of Books and Date and   |          |  |  |  |
| 0  | status column   |          |  |  |  |
| 8  | b. Create a before trigger to insert records into Librry_Audit table  |          |  |  |  |
|    | if there is deletion in Books table, insert date of deletion and status as deleted  |          |  |  |  |
|    | Create a after trigger to insert records into Librry_Audit table if there is  |          |  |  |  |
|    | updation in Books table , insert date of updation and status as updated   |          |  |  |  |
|    |   |          |  |  |  |
|    | Database Connectivity:  | CO1,CO4  |  |  |  |
|    | Write a program to implement Menu driven MySQL/Oracle   |          |  |  |  |
| 9  | database connectivity with any front end language for   |          |  |  |  |
| -  | Python/Java/PHP to implement Database navigation operations   |          |  |  |  |
|    | (add, delete, edit etc.)  |          |  |  |  |
|    | Write graving for Detahogs Administration and I   | CO4      |  |  |  |
|    | white queries for Database Automistrative work  |          |  |  |  |
|    | a. Develop an SQL script to delete all inactive user accounts that have<br>not been logged in for more than six months from a user database   |          |  |  |  |
| 10 | not been logged in for more than six months from a user database<br>b. User Management:   |          |  |  |  |
|    | i. Create a new user account with appropriate privileges and  |          |  |  |  |
|    | Modify the privileges of an existing user account to grant or   |          |  |  |  |
|    | revoke specific permissions.  |          |  |  |  |
|    |   |          |  |  |  |

|           | c. Security:  |          |
|-----------|---|----------|
|           | i. Enforce password policies to ensure strong and secure  |          |
|           | passwords for user accounts   |          |
|           | ii. Implement encryption for sensitive data stored in the   |          |
|           | database.   |          |
|           | d. Backup and Recovery:   |          |
|           | i. Perform a full database backup using appropriate backup  |          |
|           | tools or commands.  |          |
|           | ii. Schedule automated backups to run at regular intervals  |          |
| 11        |   | CO4      |
|           | Mini Project:   | CO1 to 5 |
|           | Form a group of 3 or 4 students and Using the database concepts covered,  |          |
|           | develop an application with following details:  |          |
|           | 1. Define a problem statement   |          |
|           | 2. Follow the Software Development Life cycle and other   |          |
|           | concepts learnt in Software Engineering Course throughout the   |          |
| 12        | implementation.   |          |
|           | 3. Develop application considering:   |          |
|           | Front End: Java/Perl/PHP/Python/Ruby/.net/any other   |          |
|           | language  |          |
|           | Backend : MySQL/Oracle  |          |
|           | 4. Test and validate applications using Manual/Automation   |          |
|           | testing.  |          |
