| T. Y. B. Tech. Pattern 2023 Semester: V (Mechanical Engineering) 2305301-:Machine Design-I | | | |
|--|---|----------------|---|
| Teaching Scheme: | | Credit Scheme: | Examination Scheme: |
| Theory :03 hrs/week | | 03 | Continuous Comprehensive Evaluation: 20Marks InSem Exam: 20Marks EndSem Exam: 60Marks |
| Prerequisites: The basics of material elastic behavior, stress, strain, its relationship, failure modes, different theories of failure and its applications. The design cycle, basis of design considerations like strength, rigidity, manufacture, assembly and cost, standards and codes. The preferred sizes and series, tolerances and types of fits. Construction of SMD and BMD. Roots of equations, Interpolation rule. . | | | |
| Course Objectives: 1. UNDERSTAND the various design considerations, design procedure and select materials for a specific application 2. CALCULATE the stresses in machine components due to various types of loads and failure 3. ANALYZE machine components subjected to variable loading for finite and infinite life 4. DESIGN various machine components such as shafts, couplings, keys, screws, joints. | | | |
| Course Outcomes: On completion of the course, students will be able to– | | | |
| | Course Outcomes | | Bloom’s Level |
| CO1 | Determine the dimensions of simple machine elements as cotter, knuckle Joints, levers, shafts, keys and couplings under static /eccentric loading conditions. | | 3-Apply |
| CO2 | Calculate the various stresses in power screws and apply in its design procedure. | | 3-Apply |
| CO3 | Illustrate dimensions of machine components under fluctuating loads. | | 3-Apply |
| CO4 | Analyze the stresses developed on the different type of welded and threaded joints. | | 4-Analyze |
| COURSE CONTENTS | | | |
| Unit I | Design of Simple Machine Elements | (08 hrs) | COs Mapped - CO1 |
| Factor of safety, Selection of Factor of Safety, Service factor, Design of Cotter joint, Knuckle joint, Design of hand / foot lever, lever for safety valve, bell crank lever, Design of components subjected to eccentric loading. | | | |
| Unit II | Design of Shafts, Keys and Couplings | (07hrs) | COs Mapped - CO1 |
| Shaft design on the Strength basis, torsional rigidity basis and lateral rigidity basis, Design of shaft as per A.S.M.E. code. Design of key and splines. Design of Rigid and Flexible Coupling. | | | |
| Unit III | Design of Power Screws | (07hrs) | COs Mapped – CO1, CO2 |
| Terminology of Power Screw, Torque analysis and Design of power screws with square and trapezoidal threads, Collar friction torque, Self-locking screw, Efficiency of square threaded screw, Efficiency of self-locking screw, Design of screw, nuts and C-Clamp. Design of screw jack, | | | |
| Unit IV | Design against Fluctuating loads | (07hrs) | COs Mapped – CO3 |

Stress concentration and its factors, Reduction of stress concentration factors, fluctuating stresses, fatigue failures, endurance limit, S-N curve, Notch sensitivity, Endurance limit, Endurance strength modifying factors, Reversed stresses – Design for Finite and Infinite life, Cumulative damage in fatigue failure, Soderberg, Gerber, Goodman Lines, Modified Goodman diagrams.

| | | | |
|---|-----------------------------------|----------------|-----------------------------|
| Unit V | Threaded and Welded joints | (07hrs) | COs Mapped – CO1,C04 |
| Introduction to threaded joints, Bolts of uniform strength, locking devices, eccentrically loaded bolted joint in shear, Eccentric load perpendicular and parallel to axis of bolt, Eccentric load on circular base. Introduction to welded joints, Strength of butt, parallel and transverse fillet welds, Axially loaded unsymmetrical welded joints, Eccentric load in plane of welds, Welded joints subjected to bending and torsional moments. | | | |

| | Total | 20 |

| T. Y. B. Tech. Pattern 2023 Semester: V (Mechanical Engineering) 2305302: Heat Transfer | | | |
|---|--|----------------|---|
| Teaching Scheme: | | Credit Scheme: | Examination Scheme: |
| Theory: 03 hrs/week | | 03 | Continuous Comprehensive Evaluation: 20Marks InSem Exam: 20Marks EndSem Exam: 60Marks |
| Prerequisite Courses: Engineering Thermodynamics, Fluid Mechanics, Applied Mathematics | | | |
| Course Objectives: 1. Identify the important modes of heat transfer and their applications 2. Formulate and apply the general three dimensional heat conduction equations 3. Analyze the thermal systems with internal heat generation and lumped heat capacitance 4. Understand the mechanism of convective heat transfer 5. Determine the radiative heat transfer between surfaces 6. Evaluate the performance of heat exchanger | | | |
| Course Outcomes: On completion of the course, students will be able to– | | | |
| | Course Outcomes | | Bloom's Level |
| CO1 | Apply heat transfer laws and electrical analogy to analyze one dimensional Cartesian, cylindrical and spherical coordinate systems | | 2-understand |
| CO2 | Analyze thermal systems with and without internal heat generation and transient heat conduction | | 3- Apply |
| CO3 | Evaluate heat transfer rate in convection and radiation heat transfer | | 2-Understand |
| CO4 | Apply heat transfer principles to design and estimate performance of thermal equipment's | | 2-Understand |
| COURSE CONTENTS | | | |
| Unit I | Introduction to Heat Transfer | (8 hrs) | COs Mapped – CO1, CO2 |
| Basic Concepts: Different Modes and Laws of heat transfer, 3-D heat conduction equation in Cartesian coordinates (with derivation), and its simplified equations, simplified equations in cylindrical and spherical coordinates (simplified equations, no derivation) thermal conductivity, thermal diffusivity, electrical analogy, Thermal contact Resistance. Boundary and initial conditions 1-D steady state heat conduction without and with heat generation: Heat conduction without heat generation in plane wall, composite wall, composite cylinder, composite sphere. Heat conduction with heat generation in Plane wall, Cylinder and Sphere with different boundary conditions. | | | |
| Unit II | Heat Transfer through Extended Surfaces and Transient Heat Conduction | (8 hrs) | COs Mapped - CO2 |
| Heat Transfer through Extended Surfaces: Types of fins and its applications, Governing Equation for constant cross sectional area fins, solution for infinitely long & adequately long (with insulated end) fins, efficiency & effectiveness of fins. Transient heat conduction: Validity and criteria of lumped system analysis, Biot and Fourier number, Time constant and response of thermocouple, Transient heat analysis using charts. Introduction to Two Dimensional heat conduction | | | |
| Unit III | Convection | (6 hrs) | COs Mapped – CO3 |
| Introduction: Mechanism of natural and forced convection, local and average heat transfer coefficient, concept of velocity and thermal boundary layers. Dimensionless numbers and their | | | |

| | | | |
|--|-----------------------|----------------|-------------------------|
| physical significance, Forced convection: Empirical correlations for external and internal flow for both laminar and turbulent flows. Jet impingement cooling , Film cooling Natural convection: Empirical correlations for natural convection. Condensation and Boiling: Boiling heat transfer, types of boiling, pool boiling curve and forced boiling phenomenon, condensation heat transfer, film wise and drop wise condensation | | | |
| Unit IV | Radiation | (6hrs) | COs Mapped - CO3 |
| Fundamental concepts, Spectral and total emissive power, real and grey surfaces, Stefan Boltzmann law, Plank's, Wien's, Kirchhoff's and Lambert's cosine law with simple applications, Irradiation and radiosity, Electrical analogy in radiation, Radiation shape factor, radiation heat exchange between two black and diffuse gray surfaces, radiation shield. | | | |
| Unit V | Heat Exchanger | (8 hrs) | COs Mapped - CO4 |
| Heat exchangers: Classification and applications, heat exchanger analysis – LMTD for parallel and counter flow heat exchanger, effectiveness– NTU method for parallel and counter flow heat exchanger, cross flow heat exchanger, Fouling factor, LMTD correction factor, design criteria for heat exchanger, Introduction to TEMA standards. Introduction to heat pipe, Loop heat pipe, pulsating heat pipe and Heat wheel Heat Transfer Enhancement techniques used in heat exchanger | | | |

| Theory :03 hrs/week | | 03 | Continuous Comprehensive Evaluation: 20Marks InSem Exam: 20Marks EndSem Exam: 60Marks |
| Prerequisite Courses, if any: -System of linear equations, Partial differentiation, Statistics, Probability, Problem solving and programming | | | |
| Course Objectives: 1. UNDERSTAND applications of systems of equations and solve mechanical engineering applications 2. APPLY numerical differentiation and integration techniques to solve engineering applications. 3. COMPARE the system’s behavior for the experimental data. 4. INTERPRET Statistical measures for quantitative data. 5. ANALYZE datasets using probability theory and linear algebra. | | | |
| Course Outcomes: On completion of the course, students will be able to– | | | |
| | Course Outcomes On completion of the course the learner will be able to; | | Bloom’s Level |
| CO1 | APPLY system of equations for engineering applications using direct and iterative numerical methods | | 3-Apply |
| CO2 | APPLY numerical differentiation and integration techniques to solve engineering applications. | | 3-Apply |
| CO3 | APPLY curve fitting and interpolating techniques to solve engineering applications. | | 3-Apply |
| CO4 | ANALYZE quantitative data using statistical technique | | 4-Analyze |
| CO5 | RELATE the data, using the concepts of probability and linear algebra | | 4-Analyze |
| COURSE CONTENTS | | | |
| Unit I | Solution of Equations: Algebraic, Transdental and Simultaneous Equations | (07 hrs) | COs Mapped - CO1 |
| Algebraic, Transdental Equations: Bracketing method : Bisection Method, Open End Method: Newton-Raphson Method Simultaneous Equations: Gauss Elimination Method with Partial pivoting, Gauss Seidel Method | | | |
| Unit II | Numerical Differentiation and Integration | (08 hrs) | COs Mapped - CO1, CO2 |
| Ordinary Differential Equations [ODE]: Euler Method, Runge-Kutta 2nd order method, Runge-Kutta 4 th order method Partial Differential Equations [PDE]: Finite difference method, PDE’s Parabolic explicit solution, Numerical Integration (1D): Trapezoidal rule, Simpson’s 1/3 rd Rule, Simpson’s 3/8 th Rule | | | |
| Unit III | Curve Fitting and Interpolation | (07 hrs) | COs Mapped - CO1, CO3 |
| Curve Fitting: Least square technique- first order, power equation, exponential equation and quadratic equation. Interpolation: Lagrange’s interpolation, Newton’s forward interpolation method | | | |

| Unit IV | Statistics | (07 hrs) | COs Mapped - CO1, CO4 |
|---|-------------|----------|-----------------------|
| Measures of central tendency: mean, median, mode. Measurement of variability and dispersion: Standard deviation, standard error, variance, range. Measure of shape: skewness, kurtosis Statistical diagram: scattered diagram, histogram, pie charts, and measure of association between two variables. Correlation: Karl Pearson's Coefficient of correlation and its mathematical properties, Spearman's Rank correlation and its interpretations | | | |
| Unit V | Probability | (07 hrs) | COs Mapped - CO1, CO5 |
| Probability: Joint, conditional and marginal probability, Bayes' theorem, independence, theorem of total probability, expectation and variance, random variables. Probability distributions: Binomial, Poisson, Geometric, Uniform, Exponential, Gamma, Normal and Chi square | | | |

| CO1 | Analyze thermal systems using concept of 1-D heat conduction | 3-Apply |
| CO2 | Analyze Natural and Forced convection systems using convection basics | 3-Apply |
| CO3 | Analyze thermal systems using concept of Radiation heat transfer | 3-Apply |
| CO4 | Evaluate the performance of heat exchanger | 3-Apply |

| List of Laboratory Experiments (Any Eight) | | |
|--|--|--------------------|
| Sr. No. | Laboratory Experiments / Visit | CO Mapped |
| 1. | Determination of Thermal Conductivity of metal rod | CO1 |
| 2. | Determination of Thermal Conductivity of insulating powder | CO1 |
| 3. | Determination of Thermal Conductivity of Composite wall | CO1 |
| 4. | Determination of heat transfer coefficient in Natural Convection | CO2, CO3 |
| 5. | Determination of heat transfer coefficient in Forced Convection | CO2 |
| 6. | Determination of temperature distribution, heat transfer and fin efficiency in Natural / Forced Convection | CO1, CO2, CO3 |
| 7. | Determination of Emissivity of a Test surface | CO2, CO3 |
| 8. | Determination of overall heat transfer coefficient, heat transfer and effectiveness of heat exchanger | CO1, CO2, CO3, CO4 |
| 9. | Study of pool boiling phenomenon and determination of critical heat flux | CO2 |
| 10. | Visit to any industry related to heat transfer | CO1, CO2, CO3, CO4 |
| 11. | Analysis of any heat transfer system using suitable software | |
| Guidelines for Laboratory Conduction | | |
| 1. Teacher will brief the given experiment to students its procedure, observations, calculations, and outcome of the experiment. 2. Apparatus and equipments required for the allotted experiment will be provided by the lab assistant. 3. Students will perform the allotted experiment in a group under the supervision of faculty and lab assistant. | | |

4. After performing the experiment students will check their readings, calculations from the teacher.
5. After checking they have to write the conclusion of the final result.

Guidelines for Student's Lab Journal

Write-up should include title, aim, setup diagram, working principle, procedure, observations, graphs, calculations and conclusions.

Guidelines for Assessment of Practical report

1. Each experiment from lab journal is assessed for thirty marks based on three rubrics.
2. Rubric R-1 for timely completion, R-2 for understanding and R-3 for presentation/journal writing where each rubric carries ten marks.

| T. Y. B. Tech. Pattern 2023 Semester: V (Mechanical Engineering) 2305306A:Machining Technology | | | |
|--|--|----------------|---|
| Teaching Scheme: | | Credit Scheme: | Examination Scheme: |
| Theory :03 hrs/week | | 03 | Continuous Comprehensive Evaluation: 20Marks InSem Exam: 20Marks EndSem Exam: 60Marks |
| Prerequisite Courses, if any: -Fundamentals of Mechanical Engineering - Knowledge of Materials and their properties, Stress-Strain Diagrams, Mechanics, Gear terminology, Degree of freedom etc. | | | |
| Course Objectives: | | | |
| 1. Know about fundamentals of metal cutting process, tool wear and tool life. | | | |
| 2. Impart the knowledge of machining phenomenon like milling, gear and thread manufacturing. | | | |
| 3. Select, describe and perform finishing of parts using standard tools | | | |
| 4. Understand the basic concepts, importance and functions of Jigs, Fixtures. | | | |
| 5. Select appropriate non-conventional machining process depending upon desired output characteristics | | | |
| Course Outcomes: On completion of the course, students will be able to– | | | |
| | Course Outcomes | | Bloom's Level |
| CO1 | Calculate the tool life for a single-point cutting tool based on the principles and mechanics of metal cutting | | 3-Apply |
| CO2 | Apply appropriate gear and thread manufacturing processes. | | 3-Apply |
| CO3 | Select appropriate grinding wheel and demonstrate the various surface finishing processes | | 4-Analyse |
| CO4 | Analyze and interpret engineering drawings to determine the requirements for jigs and fixtures. | | 4-Analyse |
| CO5 | Select various non-conventional machining processes such as electrochemical machining (ECM), electro discharge machining (EDM), laser cutting, abrasive jet machining (AJM), and ultrasonic machining (USM). | | 4-Analyse |
| COURSE CONTENTS | | | |
| Unit I | Mechanics of Metal Cutting | (08hrs) | COs Mapped - CO1 |
| Introduction to metal cutting, Geometry of single-point cutting tool, Orthogonal and Oblique cutting processes, Chip formation, Types of chips, Chip thickness ratio, chip breakers, Merchant's Circle of forces, Concepts of Machinability- Factors affecting machinability, Machinability Index, Tool Life, Tool life equation of Taylor, Tool wear and its types, Factors affecting on tool life. | | | |
| Unit II | Gear and Thread Manufacturing | (07 hrs) | COs Mapped - CO2 |
| Introduction, Materials of gears, Method of gear manufacturing- milling of gears (indexing methods and numerical), Helical gear cutting, Gear inspection. Thread Manufacturing: Various methods of thread manufacturing, thread rolling, die threading & tapping, Thread milling, Thread grinding etc. | | | |

| | | | |
|--|---|-----------------|-------------------------|
| Unit III | Grinding and Finishing processes | (07 hrs) | COs Mapped – CO3 |
| Types and Operations of grinding machines, Grinding wheel– Shapes, Designation and selection, Abrasives & classification, Bond & bonding, Grit, Grade & Structure of wheels, Types of grinding wheels, mounting of grinding wheels, Glazing and loading of wheels, Dressing and truing of wheels, Balancing of wheels, Diamond wheels. Super-finishing processes – Introduction to Honing, Lapping, Buffing and Burnishing. (Construction, working and controlling parameters) | | | |
| Unit IV | Jigs and Fixtures | (07 hrs) | COs Mapped – CO4 |
| Significance and purpose of jigs and fixtures and their functions in the manufacturing processes, Concept of degree of freedom, 3-2-1 principle of location. General guidelines to design jigs and fixtures. Jigs- Definition, Elements of jig with the types, Principles of clamping, Principles of guiding, Types of jig. Fixtures: Definition. Elements of fixtures, Principles of clamping, Principles of setting element, Types of fixtures. | | | |
| Unit V | Advanced Machining Processes | (07 hrs) | COs Mapped – CO5 |
| Introduction, classification of advanced machining processes. Principles, Working, Process Parameters, Estimation of MRR (simple numerical), Advantages, Limitations and Application for following processes: Electric Discharge Machining (EDM), LASER Beam Machining (LBM), Abrasive Jet Machining (AJM), Ultra Sonic Machining (USM) and Electro Chemical Machining (ECM) | | | |

| Third Year B. Tech. Pattern 2023 Semester: V (Mechanical Engineering) 2305306B :Energy Audit and Management | | | |
| Teaching Scheme: 3 Hrs /week | | Credit Scheme: 03 | Continuous Comprehensive Evaluation: 20Marks InSem Exam: 20Marks EndSem Exam: 60Marks |
| Prerequisite Courses: Thermal Engineering, Fundamental of Electrical Engineering and Applied Thermodynamics | | | |
| Course Objectives | | | |
| 1. To introduce the concepts of energy conservation. 2. To understand energy audit practices 3. To acquire knowledge on energy audit of thermal and electrical systems 4. To understand the financial analysis of energy audit. | | | |
| Course Outcomes: On completion of the course, students will be able to– | | | |
| | Course Outcomes | | Bloom’s Level |
| CO1 | UNDERSTAND the energy scenario. | | 2-Understand |
| CO2 | UNDERSTAND thermal and electrical systems | | 2-Understand |
| CO3 | APPLY the concepts to evaluate the thermal systems and electrical systems. | | 3-Apply |
| CO4 | SELECT and PREPARE the energy conservation options | | 3-Apply |
| CO5 | DEMONSTRATE understanding of financing decisions of energy audit | | 3-Apply |
| COURSE CONTENTS | | | |
| Unit I | Energy Scenario | (08 hrs) | COs Mapped – CO1 |
| Global primary energy reserves and consumption pattern, Indian energy scenario, sector wise energy consumption, energy needs of growing economy, energy pricing in India, energy security importance of energy conservation and introduction of energy conservation act 2001,Introduction to ECSBC codes. | | | |
| Unit II | Energy Economics | (06 hrs) | COs Mapped – CO1,CO3 |
| Energy economics: Simple payback period, time value of money, return on investment, net present value and internal rate of return. Energy Audit: Methodology, analysis and reporting, portable and online instruments required for energy audit, Sankey diagram and specific energy consumption. | | | |
| Unit III | Audit of Thermal Systems | (08 hrs) | COs Mapped – CO2,CO3,CO4 |
| Boiler efficiency calculation by direct and indirect method. Various losses, steam distribution and steam traps, energy conservation opportunities in boiler. Efficiency calculation of oil fired furnace, heat losses and energy conservation opportunities in furnace, Refrigeration and air conditioning systems, pumps, fans, D. G. set and cooling tower. Thermal insulation, types of insulation, economic thickness of insulation. | | | |

| | | | |
|--|---|-----------------|----------------------------------|
| Unit VI | Audit of Electrical systems | (08 hrs) | COs Mapped – CO2,CO3, CO4 |
| Demand control, billing structure, power factor improvement, benefits and ways of improving PF, load scheduling. Electric motors: Losses and efficiency, energy efficient motors, speed control methods of motor. Lighting: Illumination level, fixtures, timers, energy efficient illumination. Compressed air systems. | | | |
| Unit V | Cogeneration and Waste Heat Recovery | (06hrs) | COs Mapped – CO3,CO5 |
| Cogeneration: Concept, technical options, classification of cogeneration system i.e. topping and bottoming cycle, selection criteria, applications. Waste Heat Recovery: Introduction, classification and applications, benefits, waste heat recovery equipments i. e. recuperator, regenerator, economizer, heat wheel, heat pipe, thermo-compressor, heat pump. | | | |

|---|--|-----------------------|--|
| Teaching Scheme: | | Credit Scheme: | Examination Scheme: |
| Lecture: 03hr / week | | 03 | Insem – 20Marks Endsem – 60 Marks CCE – 20 Marks |
| Prerequisite Courses: -Mathematics for Mechanical Engineers, Design Thinking, Mechanics of Material , Geometric Modeling and Production Drawing , Manufacturing Processes, Engineering Metallurgy | | | |
| Course Objectives: | | | |
| 1. Understand pressure vessel and piping fundamentals, including types, design codes, and material selection. 2. Apply design criteria to develop pressure vessel designs suitable for various operating conditions. 3. Explore advanced topics like welding, corrosion protection, and recent innovations in pressure vessel design. 4. Gain proficiency in piping design, including stress analysis, support systems, and compliance with standards. | | | |
| Course Outcomes | | | Bloom's Level |
| CO1 | Describe fundamental principles of pressure vessels and piping, including types, design codes, and material selection, demonstrating knowledge. | | 2- Understand |
| CO2 | Apply ASME standards to develop pressure vessel designs for diverse operating conditions, demonstrating proficiency in application. | | 3- Apply |
| CO3 | Analyze welding techniques, corrosion protection methods, and recent innovations in pressure vessel design, demonstrating competence in analysis. | | 4 - Analyze |
| CO4 | Synthesize piping design principles, integrating stress analysis, support systems, and compliance with standards to propose effective solutions. | | 4 - Analyze |
| COURSE CONTENTS | | | |
| I | Introduction to Pressure Vessels | (08hrs) | COs Mapped – CO1 |
| Overview of pressure vessels, Types of pressure vessels, Design codes and standards for pressure vessels, Material selection for pressure vessels, Stress analysis fundamentals | | | |
| II | Design of Pressure Vessels | (07hrs) | COs Mapped – CO2 |
| Pressure vessel design criteria, Design considerations for different operating conditions, Design of cylindrical pressure vessels, Design of spherical pressure vessels, Design of pressure vessel supports | | | |
| III | Advanced Topics in Pressure Vessel Design | (07hrs) | COs Mapped – CO3 |
| Welding and fabrication techniques, Heat treatment, Inspections, Testing, and Quality Assurance, Recent Trends and Innovations in Pressure Vessel Design | | | |
| IV | Introduction to Piping Design | (07 hrs) | COs Mapped – CO1 |
| Basics of Piping Systems, Types of Pipes and Pipe Fittings, Piping Materials and Selection Criteria, Piping Layout and Routing | | | |

| V | Design of Piping Systems | (07hrs) | COs Mapped – CO4 |

**K.K.Wagh Institute of Engineering Education and Research, Nashik
(Autonomous from Academic Year 2022-23)**

1. Teacher will brief the given experiment to students its procedure, observations, calculation, and outcome of this experiment.
2. Apparatus and equipment's required for the allotted experiment will be provided by the lab assistants.
3. Students will perform the allotted experiment in a group under the supervision of faculty and lab assistant.
4. After performing the experiment students will check their readings, analysis, visit report from the teacher.
5. After checking they have to write the conclusion of the final result.

Guidelines for Student's Lab Journal

Write-up should include title, aim, setup diagram/layout, working principle, procedure, observations, graphs, calculations-technical and economics and conclusion.

Guidelines for Term work Assessment

6. Each experiment from lab journal is assessed for thirty marks based on three rubrics.
7. Rubric R-1 for timely completion, R-2 for understanding and R-3 for presentation/journal writing where each rubric carries ten marks.

|---|--|--|
| Teaching Scheme: | Credit Scheme: | Examination Scheme: |
| Lecture: 02hr / week | 01 | Term Work – 25Marks Oral – 25 Marks |
| Prerequisite Courses: -Mathematics for Mechanical Engineers, Design Thinking, Mechanics of Material , Geometric Modeling and Production Drawing , Manufacturing Processes, Engineering Metallurgy | | |
| Course Objectives: <ol style="list-style-type: none"> 1. Understand pressure vessel and piping fundamentals, including types, design codes, and material selection. 2. Apply design criteria to develop pressure vessel designs suitable for various operating conditions. 3. Explore advanced topics like welding, corrosion protection, and recent innovations in pressure vessel design. 4. Gain proficiency in piping design, including stress analysis, support systems, and compliance with standards. | | |
| | Course Outcomes | Bloom's Level |
| CO1 | Describe fundamental principles of pressure vessels and piping, including types, design codes, and material selection, demonstrating knowledge. | 2- Understand |
| CO2 | Apply ASME standards to develop pressure vessel designs for diverse operating conditions, demonstrating proficiency in application. | 3- Apply |
| CO3 | Analyze welding techniques, corrosion protection methods, and recent innovations in pressure vessel design, demonstrating competence in analysis. | 4 - Analyze |
| CO4 | Synthesize piping design principles, integrating stress analysis, support systems, and compliance with standards to propose effective solutions. | 4 - Analyze |
| COURSE CONTENTS | | |
| Term Work shall consist of following assignments: | | |
| One Design Project on pressure Vessel: The design project shall consist of two imperial size sheets (Preferably drawn with 3D/2D CAD software) - one involving assembly drawing with a part list and overall dimensions and the other sheet involving drawings of individual components, manufacturing tolerances, surface finish symbols and geometric tolerances must be specified so as to make it working drawing. A design report giving all necessary calculations of the design of components and assembly should be submitted. | | |
| Each student shall complete any two of the following assignments. <ol style="list-style-type: none"> 1. Write assignment on codes and standard used in piping design 2. A case study on piping design calculations for any system. 3. An assignment on specialty components used in piping system. 4. An assignment on occasional loads calculations for the piping system. 5. Use any suitable software and complete one design project on piping system. | | |

| | Course Outcomes | | Bloom's Level |
| CO1 | Demonstrate the concept of sensors ,actuators & Data Acquisition system | | 2- Understand |
| CO2 | Interpret the Physical system through Modelling and block diagram | | 3 - Apply |
| CO3 | Analyze the given system for Time , Frequency Domain and stability | | 4 - Analyze |
| CO4 | Evaluate the concept of PLC & PID controller for different applications. | | 5 - Evaluate |
| COURSE CONTENTS | | | |
| Unit I | Fundamentals of Instrumentation, Sensors and Actuators | (8hrs) | COs Mapped - CO1 |
| Elements of Measurement System and Mechatronics, Static and Dynamic Characteristics of Measuring Instruments, Domains of Mechatronics Sensors: Classification of sensors / Transducers; Motion Sensors – Encoder (Absolute & incremental), Lidar, Proximity (Optical, Inductive, Capacitive), Accelerometer (MEMS & Piezoelectric); Temperature sensor –Pyrometer, Infrared Thermometer; Force Sensors – Strain gauges, Flow sensors – Electromagnetic, Ultrasonic, Hot-wire anemometer; Actuators: Linear (Solenoid) and Rotary (Stepper, Servo) | | | |
| Unit II | Data Acquisition and Signal Communication | (7hrs) | COs Mapped – CO1 |
| Signal Communication: Serial, Parallel; Synchronous, Asynchronous Introduction to DAQ, Types, Components of a Data Acquisition System Data Conversion: Sampling, Aliasing, Sample and hold circuit, Quantization, Analog-to-digital converters (4 bit Successive Approximation type ADC), Digital-to-Analog converters (4 bit R2R type DAC) | | | |
| Unit III | Control systems & Transfer function based modelling | (7hrs) | COs Mapped – CO2 |
| Introduction to control systems, need, Types- Open and Closed loop, Concept of Transfer Function, Block Diagram & Reduction principles and problems; Transfer Function based Modeling of Electrical, Mechanical, Thermal and Fluid system; | | | |
| Unit IV | System Analysis | (7hrs) | COs Mapped –CO3 |
| Time Domain Analysis - Unit step Response analysis via Transient response specifications (Percentage overshoot, Rise time, Delay time, Steady state error etc.) | | | |

Frequency Domain Analysis – Frequency Domain Parameters - Natural Frequency, Damping Frequency and Damping Factor;
Stability Analysis - Concept of Poles & Zeros; Pole zero plot, Mapping of Pole Zero plot with damping factor, natural frequency and unit step response, Stability Analysis using Routh Hurwitz Criterion, and Bode Plot

| | | | |
|---------------|--------------------|---------------|-------------------------|
| Unit V | Controllers | (7hrs) | COs Mapped – CO4 |
|---------------|--------------------|---------------|-------------------------|

Classification of Controllers
PID Controller - PI, PD and PID control systems in parallel form; Manual tuning of PID control, Ziegler–Nichols method,
PLC Controller - Introduction to PLC; Architecture of PLC; Ladder Logic programming for different types of logic gates; Latching; Timers, Counters;

| List of Tutorials |
|--|
| <ol style="list-style-type: none"> 1. Simulate the performance of a bio-sensor using Virtual Lab Link – (https://sl-coep.vlabs.ac.in/exp/performance-bio-sensor/simulation.html) 2. Measurement of Temperature sensor characteristics (Thermocouple /RTD) using Virtual Lab : https://sl-coep.vlabs.ac.in/List%20of%20experiments.html 3. Measurement of Load using suitable sensor 4. Measurement of level in a tank using capacitive type level probe 5. Modeling and analysis of mechanical system and its verification using suitable simulation software. 6. To study, understand and perform experiments on timers and counters using Virtual lab for Industrial Automation 7. Sketch Bode Plot for Stability Analysis of a given system |

| List of Laboratory Experiments / Assignments | | |
|--|---|-----------|
| The Term work shall consist of completion of Practical, Self-learning Study Assignments and Presentations. | | |
| Sr. No. | Laboratory Experiments / Assignments | CO Mapped |
| 1 | Study of Switches and Relays | CO1 |
| 2 | Experiment on measurement of displacement using suitable sensor | CO1 |
| 3 | Development of a data acquisition / mechatronics system using low cost open source hardware and software. | CO1, 2 |
| 4 | Experiment on interfacing of suitable sensor and actuator with DAQ. | CO1 |

| | | |
|--|---|-----|
| 5 | PID control of Mechanical System using suitable simulation software and experimental verification | CO3 |
| 6 | Ladder Logic Simulation of suitable application. | CO4 |
| 7 | Demonstration of PLC controlled Lift Simulator / Rotary Bottle Filling plant. | |
| 8 | Industrial visit to understand integration and application of Mechatronics | |
| Guidelines for Tutorial / Laboratory Conduction | | |
| 6. Teacher will brief the given experiment to students its procedure, observations calculation, and outcome of this experiment. 7. Apparatus and equipment's required for the allotted experiment will be provided by the lab assistants using SOP. 8. Students will perform the allotted experiment in a group (two students in each group) under the supervision of faculty and lab assistant. 9. After performing the experiment students will check their readings, calculations from the teacher. 10. After checking they have to write the conclusion of the final result. | | |
| Guidelines for Student's Lab Journal | | |
| Write-up should include title, aim, Diagram, working principle, procedure, observations, graphs, calculations, conclusion and questions, if any. | | |
| Guidelines for Tutorial / Laboratory Assessment | | |
| 3. Each Tutorial and experiment from Lab journal is assessed for thirty marks based on three rubrics. 4. Rubric R-1 for timely completion, R-2 for understanding and R-3 for presentation/journal writing where each rubric carries ten marks. | | |

| Prerequisite Courses, if any: -Classification of Gears, Gear Terminology, Terminology of Helical gear, Virtual number of teeth. Classification, selection and application of Belt and chain drives. | | | |
| Course Objectives: | | | |
| <ul style="list-style-type: none">To apply fundamentals of the design and/or selection of elements in mechanical systems. | | | |
| <ul style="list-style-type: none">To understand the philosophy that real engineering design problems are open-ended and challenging. | | | |
| <ul style="list-style-type: none">To demonstrate design skills for the problems in real life industrial applications. | | | |
| <ul style="list-style-type: none">To develop an attitude of team work, critical thinking, communication, planning and scheduling through design projects. | | | |
| Course Outcomes: On completion of the course, students will be able to– | | | |
| | Course Outcomes | | Bloom's Level |
| CO1 | Apply the principle of Spur, Helical, Bevel, Worm gear for industrial application | | 3-Apply |
| CO2 | Categorize Rolling and Sliding Contact Bearings from manufacturer's catalogue for a particular application using suitable design parameters. | | 3-Apply |
| CO3 | Illustrate design of various drives for mechanical applications. | | 3-Apply |
| CO4 | Analyze the stresses and determine the dimensions of various springs for mechanical applications. | | 4-Analyze |
| COURSE CONTENTS | | | |
| Unit I | Spur and Helical Gears | (08hrs) | COs Mapped - CO1,CO3 |
| Introduction to gears: Material selection for gears, Modes of gear tooth failure, Gear Lubrication Methods. Number of teeth and face width, Force analysis, Beam strength (Lewis) equation, Velocity factor, Service factor, Load concentration factor, Effective load on gear, Wear strength (Buckingham's) equation, design of gear | | | |
| Unit II | Bevel and Worm Gear | (07hrs) | COs Mapped - CO1,CO3 |
| Bevel Gears: Types of Bevel gears, Terminology, Virtual number of teeth, and force analysis of Straight Bevel Gear. Design of Straight Bevel Gear based on Beam Strength, Wear strength and estimation of effective load based on Velocity factor (Barth factor) and Buckingham's equation. Worm Gears: Terminology and proportions of worm and worm gears, Force analysis of drives, Friction in Worm gears, efficiency of worm gears, material selection, Strength and wear ratings of worm gears (Bending stress factor, speed factor, surface stress factor, zone factor) IS 1443-1974, Thermal consideration in gear drive | | | |
| Unit III | Sliding and Rolling Contact Bearing | (07hrs) | COs Mapped – CO2 |
| Sliding contact bearing: Introduction to sliding contact bearing, classification, Reynolds's equation (2D), Petroff's equations, Sommerfeld number, Parameters of bearing design. Rolling Contact Bearings: Types of rolling contact Bearings and its selection, Static and dynamic load carrying | | | |

| | | | |
|---|---------------------------------------|----------------|-------------------------|
| capacities, Stribeck's Equation, Equivalent bearing load, Load-life relationship, Selection of bearing life, Selection of rolling contact bearings from manufacturer's catalogue, Design for cyclic loads. | | | |
| Unit IV | Drives : Belt and Chain Drives | (07hrs) | COs Mapped – CO3 |
| Belt Drives: Materials and construction of flat and V belts, geometric relationships for length of belt, power rating of belts, concept of slip & creep, initial tension, effect of centrifugal force, maximum power condition, Selection of Flat and V-belts from manufacturer's catalog, belt tensioning methods, relative advantages and limitations of Flat and V- belts, construction and applications of timing belts. Chain Drives : Types of chains and its Geometry, selection criteria for chain drive, Polygon effect of chain, Modes of failure for chain, Lubrication of chains | | | |
| Unit V | Mechanical Springs | (07hrs) | COs Mapped – CO4 |
| Types, applications and materials for springs, Stress and deflection equations for helical compression Springs, Style of ends, Design of helical compression and tension springs, Springs in series and parallel, Surge in springs, Design of Multi-leaf springs. Helical torsion Spring | | | |

| Teaching Scheme: | | Credit Scheme: | Examination Scheme: |
| Lecture: 03 hr / week | | 03 | Continuous Comprehensive Evaluation: 20Marks InSem Exam: 20Marks EndSem Exam: 60Marks |
| Prerequisite Courses: -Linear algebra and calculus, Engineering Thermodynamics, Fluid Mechanics and Heat transfer | | | |
| Course Objectives: <ul style="list-style-type: none">To study the energy scenario, the components of thermal energy based plant, improved Rankine cycle.To understand details of steam condensing plant, cooling tower system, analysis of condenser, the environmental impacts and methods to reduce various pollution from energy systems.To study layout and component details nuclear power and hydro-electric power plants and also to study economics of power generation.To understand components, layout of gas turbine and combined power plants.To study the working principle, construction of renewable energy systems. | | | |
| | Course Outcomes | | Bloom's Level |
| CO1 | EXPLAIN the power generation scenario, the layout components of conventional and non-conventional power plants and their environmental impacts. | | 2 |
| CO2 | Apply energy analysis for performance determination of power plants | | 3 |
| CO3 | ANALYZE the performance of power plants from technical aspects and economics | | 4 |
| CO4 | Evaluate the actual performance of thermal and solar power plants through case studies. | | 5 |
| COURSE CONTENTS | | | |
| I | Energy Scenario and Thermal Power Plant | (08 hrs) | COs Mapped – CO1, CO2, CO4 |
| Energy Scenario: Global and Indian energy scenario, role of Government and Private Organizations, Energy crisis, energy security, energy policy. Thermal Power Plant: layout of modern thermal energy based plant with different circuits, site selection, classification of coal, coal beneficiation, selection of coal for thermal power plant, slurry type fuels, Coal handling plant, pulverized fuel handling systems. FBC systems, high pressure | | | |

| | | | |
|--|--|----------|----------------------------------|
| boilers, improved Rankine cycle with reheating and regeneration. Environmental impact of power plants: Different pollutants produce by power plants, methods to control pollutants | | | |
| II | Condenser, power plant economics | (07 hrs) | COs Mapped – CO1, CO2, CO3 |
| Condensers and Cooling Towers: Types of Condensers, Classification of Condenser, Quantity of cooling water Required, Daltons Law of Partial Pressures, vacuum efficiency, condenser efficiency, Sources of Air Leakage and Air Removal, Cooling Towers, Cooling Ponds. Economics of power generation: load duration curve, load factor, capacity factor, Reserve factor, Demand factor, Diversity factor, Plant use factor, cost of power generation. Heat rate and Incremental heat rate. | | | |
| III | Nuclear and Hydro-Electric Power Plant | (07 hrs) | COs Mapped – CO1, CO2 |
| Nuclear Power plant: Nuclear fission/fusion, elements of nuclear reactor, types of nuclear reactor: PWR, BWR, CANDU, LMCGR, GCR, Nuclear waste disposal, Nuclear power development programme of India. Hydro-electric Power Plant: Introduction to hydrology, hydrograph, flow duration curve, mass curve, site selection, classification, criteria for turbine selection, components of Hydroelectric power plant - dams; spillways; surge tank and forebay. | | | |
| IV | Gas Turbine Power plant | (07 hrs) | COs Mapped – CO1, CO2 |
| Gas turbine power plant: components, general layout of GTPP, open and closed cycle gas turbine plant, Brayton cycle analysis for thermal efficiency, work ratio, maximum & optimum pressure ratio, methods to improve thermal efficiency of GTPP: inter-cooling, reheating, regeneration cycle. Combined cycle: Gas and steam combined cycle plant, Cogeneration, introduction to tri-generation, steam power plants with process heating, Integrated Gasification Combined Cycle (IGCC) plant, Kalina (Cheng) Cycle. | | | |
| V | Renewable Energy Systems | (07 hrs) | COs Mapped – CO1, CO4 |
| Introduction to various renewable energy technologies: Tidal Energy, Ocean Thermal Energy, Biomass Energy, Hydrogen Energy, etc. Solar thermal and photovoltaic energy: solar thermal plant based on flat plate collector; solar photovoltaic systems, applications, economics and technical feasibility. Wind Energy: wind availability, basic components of wind turbines, types, performance operating characteristics, wind solar hybrid power plants, Cost economics and viability of wind farm. | | | |

K.K.Wagh Institute of Engineering Education and Research, Nashik
(Autonomous from Academic Year 2022-23)

| T. Y. B.Tech. Pattern2023 Semester: VI ((Mechanical Engineering)) 2305313 : Machine Design Lab (I & II) | | |
|---|----------------|-------------------------------------|
| Teaching Scheme: -- | Credit Scheme: | Examination Scheme: |
| Practical:02hrs/week | 01 | Termwork: 25Marks Oral : 25Marks |
| Prerequisite Courses, if any: - Mechanics of material, Manufacturing process, Engineering Metallurgy, MD-I | | |

Course Outcomes: On completion of the course, students will be able to–

| | Course Outcomes | Bloom's Level |
|-----|--|---------------|
| CO1 | Illustrate the simple machine elements as cotter, knuckle Joints, levers, shafts, keys and couplings under static /eccentric loading conditions. | 4-Analyze |
| CO2 | Analyze the power screws for various engineering applications. | 4-Analyze |
| CO3 | Categorize the gear box for industrial application by using Spur, Helical, Bevel, Worm gear etc . | 4-Analyze |
| CO4 | Select various drives for industrial application | 4-Analyze |

| List of Laboratory Experiments /Assignments | | |
|--|---|-----------|
| Sr. No. | Term Work | CO Mapped |
| Student shall complete the following activity as a Term Work; The Submission shall consist of completion of Two Design projects and study Assignments. Oral examination shall be based on the practical undertaken during the semester | | |
| 1 | Design a Simple Machine Elements : (Cotter Joints/ Knuckle Joint/ Lever etc.,) | CO1 |
| 2 | Design of Screw Jack/ C Clamp : (Automobile Application / Industrial Application, etc.,) | CO2 |
| 3 | Design of Gearbox for following any one problem statements or application 1. wind mill application or sluice gate 2. building Elevator 3. Industrial Hoist. 4. Sugar Industry. 5. Automobile drives etc. | CO3 |

| | | |
|--|--|-----|
| 4 | Design a Conveyer System for following any one application (Stone Crusher, Industry Pallet Transformation, Thermal power plant(Coal transportation), Sugar Industry (Sugar Bag transportation), Airport Luggage transportation etc.) | CO4 |
| Guidelines for Laboratory Conduction | | |
| Practical are to be performed under the guidance of concerned faculty member. | | |
| Guidelines for Student's Lab Journal | | |
| <p>Projects shall be in the form of design of mechanical systems, etc.</p> <p>The design project shall consist of two full imperial (A1) size sheets involving assembly drawing with a part list and overall dimensions and drawings of individual components. (For sheets use software for Project 1 & 3 and sheets should be manually drawn for project 2 & 4)</p> <p>Manufacturing tolerances, surface finish symbols and geometric tolerances should be specified for important surfaces. A design report giving all necessary calculations of the design of components and assembly should be submitted in a separate file.</p> <p>Design data book shall be used where ever necessary to achieve selection of standard components.</p> | | |
| Guidelines for Termwork Assessment | | |
| <ol style="list-style-type: none"> Each project will be assessed for thirty marks based on three rubrics. Rubric R-1 for timely completion, R-2 for understanding and R-3 for design report and sheets where each rubric carries ten marks. File should consist of Design Report and Sheets for every project. | | |

| Pattern 2023 Semester: VI (Mechanical Engineering) | | | |
| 2305314A : Finite Element Analysis | | | |
| Teaching Scheme: | | Credit Scheme: | Examination Scheme: |
| Theory :03 hrs/week | | 03 | Continuous Comprehensive Evaluation: 20Marks InSem Exam: 20Marks EndSem Exam: 60Marks |
| Prerequisite Courses, if any: -Mechanics of materials, Thermodynamics, Machine Design | | | |
| Course Objectives: 8. To understand fundamentals of FEA for finite element formulation 9. To understand the 1D structural member for displacement, stress 10. To understand2D structural member for displacement, stress 11. To understand the heat transfer problems for temperature, thermal stress, heat flux 12. To understandthe mechanical component for dynamic conditions | | | |
| Course Outcomes: On completion of the course, students will be able to– | | | |
| | Course Outcomes On completion of the course the learner will be able to; | | Bloom's Level |
| CO1 | Apply fundamentals of FEA for finite element formulation | | 3 (Apply) |
| CO2 | Analyze the 1D structural member for displacement, stress | | 4 (Analyze) |
| CO3 | Analyze the2D structural member for displacement, stress | | 4 (Analyze) |
| CO4 | Analyze the heat transfer problems for temperature, thermal stress, heat flux | | 4 (Analyze) |
| CO5 | Analyze the mechanical component for dynamic conditions | | 4 (Analyze) |
| COURSE CONTENTS | | | |
| Unit I | Fundamentals Concepts of FEA | (08hrs) | COs Mapped – CO1 |
| Introduction– Brief History of FEM, Finite Element Terminology (nodes, elements, domain, continuum, Degrees of freedom, loads & constraints) General FEM procedure, Applications of FEM in various fields, P & h formulation, Advantages and disadvantages of FEM. Consistent units system. Introduction to different approaches used in FEA such as direct approach and energy approach, Shape functions and its properties. Applying basics and fundamental procedure of FEA for system of spring. | | | |
| Unit II | 1D Elements | (07 hrs) | COs Mapped - CO2 |
| Types of 1D element. Displacement function, Global and local coordinate systems, Order of element, primary and secondary variables. Formulation of elemental stiffness matrix and load vector, Assembly of global stiffness matrix and load vector, Properties of stiffness matrix, Boundary conditions, elimination method, Symmetric boundary conditions, Stress calculations for bar, truss. | | | |
| Unit III | 2D Elements | (07 hrs) | COs Mapped – CO3 |
| Types of 2D elements, Formulation of elemental stiffness matrix and load vector for Plane stress/strain such as Linear Strain Rectangle (LSR), Constant Strain Triangles (CST), Pascal's triangle , primary and secondary variables, properties of shape functions. Assembly of global stiffness matrix and load vector, Boundary conditions, solving for primary variables (displacement) | | | |

| | | | |
|--|---|-----------------|-------------------------|
| Unit IV | 1D Steady State Heat Transfer Problems | (07 hrs) | COs Mapped – CO4 |
| Introduction, Governing differential equation, steady-state heat transfer formulation of 1D element for conduction and convection problem, boundary conditions and solving for temperature distribution | | | |
| Unit V | Dynamic Analysis | (07 hrs) | COs Mapped – CO5 |
| Types of dynamic analysis, General dynamic equation of motion, point and distributed mass, lumped and Consistent mass, Mass matrices formulation of bar and beam element. Undamped-free vibration- Eigenvalue problem, Evaluation of eigenvalues and eigenvectors (natural frequencies and mode shapes). | | | |

| Pattern: 2023 | | Semester: VI(Mechanical Engineering) | |
| 2305314B: Renewable Energy Engineering | | | |
| Teaching Scheme: | | Credit Scheme: | Examination Scheme: |
| Lecture: 03 hr / week | | 03 | Continuous Comprehensive Evaluation: 20Marks InSem Exam: 20Marks EndSem Exam: 60Marks |
| Prerequisite Courses: -Engineering Thermodynamics, Fluid Mechanics and Heat Transfer | | | |
| Course Objectives: | | | |
| 1. To understand the basics of renewable energy sources and technologies. | | | |
| 2. To design solar thermal conversion systems and solar photovoltaic systems for different applications. | | | |
| 3. To understand wind energy sources and technologies and also to design a wind energy systems. | | | |
| 4. To study the biomass energy conversion systems. | | | |
| 5. To study the Geothermal , Tidal and Wave energy | | | |
| 6. To explain principle and working of fuel cell and hydrogen energy technologies | | | |
| | Course Outcomes | | Bloom's Level |
| CO1 | Understanding of solar systems for a given energy utility by applying principles of solar energy conversion. | | 3 |
| CO2 | Estimate the wind energy potential and analyse the wind energy conversion System. | | 3 |
| CO3 | Design bio-energy based systems for a given utility by applying principles of bio-mass to bio-energy conversion. | | 2 |
| CO4 | Characterize energy conversion systems: Geothermal, Tidal and Wave energy, Fuel Cells and Hydrogen Energy. | | 2 |
| COURSE CONTENTS | | | |
| I | Solar Radiation and Solar Systems | (08 hrs) | COs Mapped – CO1 |
| Extra-terrestrial and terrestrial radiation, Solar radiation measuring instruments, Estimation of solar Radiation, solar geometry, Solar Energy Conversion Systems | | | |
| Solar thermal systems: Basics, Flat plate collectors-liquid and air type. Theory of flat plate collectors, selective coating, advanced collectors, Concentrators: optical design of concentrators, solar water heater, solar dryers, solar stills, Solar ponds, solar cooling and refrigeration, Solar thermal power | | | |

| | | | |
|--|---|----------|-------------------------|
| generation. | | | |
| Solar Photovoltaic Systems: Principle of photovoltaic conversion of solar energy, Solar cells, Solar PV pumps, Govt. policies. Solar energy storage options: Electrical and Thermal Energy storage options | | | |
| II | Wind Energy Conversion Systems | (07 hrs) | COs Mapped – CO2 |
| History of wind energy and potential, Wind energy in India, Power available in the wind, Wind speed prediction and forecasting, Betz limit, Components of wind energy conversion systems, Horizontal and Vertical axis wind turbine, Wind turbine power and torque characteristics, Tip speed ratio, | | | |
| III | Biomass Energy | (07 hrs) | COs Mapped – CO3 |
| biochemical conversion: anaerobic digestion, ethanol fermentation, biogas production, types of biogas plant, installation, operation and maintenance of biogas plants, factors affecting biogas production, biogas utilization and storage, biogas for motive power generation, design calculations for biogas plants, Biodiesel, the mechanism of trans esterification, fuel characteristics of biodiesel, technical aspects of biodiesel/Ethanol utilization in engine. Biomass gasification system and types, producer gas. Pyrolysis | | | |
| IV | Geothermal , Tidal and Wave energy | (07hrs) | COs Mapped – CO4 |
| Geothermal Energy: structure of earth's interior, geothermal sites, geothermal field and gradients, types of geothermal resources, power generation by liquid dominated and vapor dominated sites, geothermal preheat to conventional plant, utilization of geothermal energy. Tidal Energy: Tidal energy, tidal characteristics, range, power of tides, site selection types tidal power plant Wave Energy: factors affecting wave energy, analysis of wave energy, wave energy conversion machines. | | | |
| V | Fuel Cell and Hydrogen Energy | (07 hrs) | COs Mapped – CO4 |
| Fuel cells: principle of operation of fuel cell, Technical parameters of fuel cell, hydrogen fuel cell, Methanol fuel cell, Types fuel cell, performance of fuel cell. Hydrogen Energy: Benefits of hydrogen Energy, Hydrogen production Technologies, characteristics and applications of hydrogen, Hydrogen energy Storage, Problems associated with hydrogen energy. | | | |
| Text Books | | | |

| Prerequisite Courses, if any: -Mathematics, Physics, Systems in Mechanical Engineering, Engineering Thermodynamics, Applied Thermodynamics, Fluid Mechanics, Numerical & Statistical Methods, Heat & Mass Transfer, Computer Aided Engineering | | | |
| Course Outcomes: On completion of the course, students will be able to– | | | |
| | Course Outcomes | | Bloom’s Level |
| CO1 | Recognize the fundamental principles of mass conservation | | 2-Understand |
| CO2 | Comprehend the fundamental properties and behaviors of PDEs | | 2-Understand |
| CO3 | Apply error minimization techniques to assess the accuracy of numerical solutions | | 3-Apply |
| CO4 | Apply the Finite Difference Method (FDM) to discretize differential equations | | 3-Apply |
| CO5 | Pertaining to the conceptual basics of steady-state diffusion problems | | 3-Apply |
| COURSECONTENTS | | | |
| UnitI | Introduction to computational fluid dynamics and principles of conservation | (08 hrs) | COs Mapped - CO1 |
| Continuity Equation, Navier Stokes Equation, Energy Equation and Conservation Equations. | | | |
| UnitII | Classification of partial differential equations and physical behaviour | (07 hrs) | COsMapped - CO1,CO2 |
| Mathematical classification of Partial Differential Equation, Illustrative examples of elliptic, parabolic and hyperbolic equations, Physical examples of elliptic, parabolic and hyperbolic partial differential equations. | | | |
| Unit III | Approximate solutions of differential equations | (07 hrs) | COsMapped- CO1.CO2.CO3 |

**K.K.Wagh Institute of Engineering Education and Research, Nashik
(Autonomous from Academic Year 2022-23)**

Error Minimization Principles, Functional involving higher order derivatives, Approximate solution of differential equations through variation formulation, Boundary conditions in the variation form: Primary and secondary variables, Essential and natural boundary conditions, Approximate solutions of differential equations,

| | | | |
|---|--|-----------------|-----------------------------------|
| Unit IV | Fundamentals of discretization- | (07 hrs) | COs Mapped - CO1, CO3, CO4 |
| Discretization principles: Pre-processing, Solution, Post-processing, Finite Element Method, 3 Finite difference method, Well posed boundary value problem, Possible types of boundary conditions, Conservativeness, Boundedness, Transportiveness, Finite volume method (FVM), Illustrative examples: 1-D steady state heat conduction without and with constant source term. | | | |
| Unit V | Finite volume method | (07 hrs) | COs Mapped - CO1, CO2, CO5 |
| Some Conceptual Basics and Illustrations through 1-D Steady State Diffusion Problems: Physical consistency, Overall balance, FV Discretization of a 1-D steady state diffusion type problem, Composite material with position dependent thermal conductivity, Four basic rules for FV Discretization of 1-D steady state diffusion type problem, Source term linearization, Implementation of boundary conditions | | | |

| Prerequisite Courses, if any: - Engineering Mathematics, Theory of probability, Statistics | | | |
| Course Objectives: To familiarize the students with the use of practice oriented mathematical applications for optimization functions in an organization. To familiarize the students with various tools of optimization, probability, statistics and simulation, as applicable in particular scenarios in industry for better management of various resources. | | | |
| Course Outcomes: On completion of the course, students will be able to– | | | |
| | Course Outcomes | | Bloom’s Level |
| CO1 | Apply LPP and Decision Theory to solve the problems | | 3-Apply |
| CO2 | Apply the concept of transportation models to optimize available resources | | 3-Apply |
| CO3 | Apply the concept of Inventory control and replacement analysis | | 3-Apply |
| CO4 | Evaluate the process parameters for queuing theory and sequencing models | | 3-Apply |
| CO5 | Analyze the project management techniques. | | 4-Analyze |
| COURSE CONTENTS | | | |
| Unit I | Introduction: Operation Research | (08 hrs) | COs Mapped - CO1 |
| Introduction: Definition, Evolution and Classification of Quantitative Methods and Operations Research Techniques, Methodology, Advantages and Limitations. Linear Programming Problem: Introduction, Formulation of LPP, Solution of LPP by Two Phase Method only. Decision Theory: Meaning and Steps in Decision Making, Types of Management Decisions, Decision under Certainty, under Risk, under Uncertainty, Decision Trees | | | |
| Unit II | Transportation & Assignment Model | (07hrs) | COs Mapped - CO1, CO2 |
| Introduction, Formulation, Basic Method of Solving Transportation Problem, Optimization Methods like UV and Stepping Stone Method, Assignment Problem- Hungarian Method to solve Assignment Problem. | | | |
| Unit III | Inventory Control and Replacement Analysis | (07hrs) | COs Mapped - CO1, CO3 |
| Inventory Control - Deterministic Models- Shortage, without shortage; Probabilistic Inventory Models, Introduction to Concept of Service level. Replacement Analysis - Replacement of Items that Deteriorate, Replacement of Items that Fail Suddenly | | | |
| Unit IV | Queuing Theory and Sequencing Models | (07hrs) | COs Mapped - CO1, CO4 |
| Queuing Theory: Introduction, Basis Structure, Terminology (Kendal’s Notations) and Applications. Queuing Model M/M/1: /FIFO, M/M/c. Sequencing models : Solution of sequencing Problem - Processing of n jobs through two machines, Processing of n jobs through three machines, Processing of two jobs through m | | | |

| | | | |
|---|---------------------------|----------------|------------------------------|
| Machines, Processing of n jobs through m Machines | | | |
| Unit V | Project Management | (07hrs) | COs Mapped - CO1, CO5 |
| Network Models: Fulkerson's rule, concept and types of floats, CPM and PERT, Crashing Analysis Unit 5: Queuing Theory and Sequencing Models and Resource Scheduling. Simulation: Introduction, Monte-Carlo Simulation method, Simulation of Inventory and Queuing Problems. | | | |

| Course Objectives | | | |
| Understand the importance of CIM and factory automation. | | | |
| Learn to integrate hardware, software, and generate CNC programs for CIM. | | | |
| Explore advanced manufacturing concepts, including flexible manufacturing, cellular manufacturing, group technology, | | | |
| Explore Theoretical concepts of IoT, Industry 4.0, and cloud-based manufacturing. | | | |
| | | | |
| Course Outcomes: On completion of the course, students will be able to– | | | |
| | Course Outcomes | | Bloom’s Level |
| CO1 | Understand the Principles of CIM | | 2-Understand |
| CO2 | Apply Data Integration Techniques in CIM | | 3-Apply |
| CO3 | Demonstrate Proficiency in CAM and CNC Programming | | 4-Analyze |
| CO4 | Analyze Computer-Aided Process Planning (CAPP) methodologies | | 4-Analyze |
| CO5 | Analyze Theoretical Concepts of Future Manufacturing Technologies | | 4 - Synthesize |
| COURSE CONTENTS | | | |
| Unit I | Unit 1: Foundations of CIM | (08 hrs) | COs Mapped - CO1 |
| Need and Evolution of CIM, CIM Hardware and Software, Role of CIM System, Definition of CIM and Types of Automation, Functions in Manufacturing, CIM Wheel and Computerized Elements, Advantages of CIM | | | |
| Unit II | Data Integration in CIM | (07 hrs) | COs Mapped - CO1, CO2 |
| CAD-CAM Integration, Product Development through CIM, Design Activities in a Networked Environment, Networking in Manufacturing, CIM Database and Database Management, EDM, PDM, PLM in CIM | | | |
| Unit III | CAM in CIM | (07 hrs) | COs Mapped - CO3 |
| Introduction to CAM, Coordinate System and CNC Principles, CNC Lathe, Turning Centers, Milling Machines, CNC Part Programming, Tool and Geometric Compensations, Canned Cycles, Subroutines, Do Loops, CIM Integral Machines | | | |
| Unit IV | Process Planning, Quality Control, and MRP | (07 hrs) | COs Mapped – CO4 |
| CAPP and Benefits, Logical Steps in CAPP, MRP, Capacity Planning, MRP-II, ERP Concepts and its Applications, Computer-Aided Production Scheduling, Control Systems: Shop Floor, Inventory, Inspection, MES | | | |
| Unit V | FMS, Cellular Manufacturing, and Future Smart Factories | (07 hrs) | COs Mapped – CO5 |

Flexible Manufacturing Systems (FMS), FMS Components, Layouts, and Applications
Group Technology (GT) and Part Families, Industry 4.0 and Functions, IoT Applications in
Manufacturing, Digital Manufacturing in Industry 4.0, Scheduling, Lean Manufacturing

| 1 | One Assignments on Unit-1, Unit-2, Unit-3,Unit-4,Unit-5 | 10 |
| 2 | Pre insem test and pre end sem test | 5 |
| 3 | LMS Test | 5 |
| | Total | 20 |

| T. Y. B. Tech. Pattern 2023 Semester: VI (Mechanical Engineering) 2305315B:Automobile Engineering | | | |
|---|--|----------------|--|
| Teaching Scheme: | | Credit Scheme: | Examination Scheme: |
| Theory :3 hrs/week | | 03 | Insem – 20 Marks End Sem – 60 Marks Continuous Comprehensive Evaluation: 20Marks |
| Prerequisite Courses, if any: -Fundamentals of Mechanical Engineering, Mechanism and Machines, Energy Systems for Mobility. | | | |
| Course Objectives | | | |
| 1. To develop a comprehensive understanding of automobile systems and their fundamental principles. 2. To comprehend Chassis, Powertrain, and Mobility Components. 3. To analyze Suspension, Brake Systems, and Vehicle Performance. 4. To explore Automotive Safety Standards and Emerging Technologies. 5. To make students conservant about Electrical Systems and Vehicle Maintenance. | | | |
| Course Outcomes: On completion of the course, students will be able to– | | | |
| | Course Outcomes | | Bloom’s Level |
| CO1 | Explain and Compare automotive system for the vehicle. | | 2-Understand |
| CO2 | Describe different types of mobility components and their respective functionalities. | | 2-Understand |
| CO3 | Classify vehicle safety systems and comprehend their roles in risk mitigation and occupant protection. | | 2-Understand |
| CO4 | Apply knowledge of suspension and brake systems in automobiles for maintenance tasks. | | 3-Apply |
| CO5 | Analyze factors impacting vehicle performance and evaluate testing methodologies. | | 4-Analyze |
| COURSE CONTENTS | | | |
| Unit I | Introduction | (08hrs) | COs Mapped - CO1 |
| Introduction: History and evolution of automobiles, Current trends and challenges in the automotive industry. Chassis and Frames: Types, layout and constructional features of chassis and frames, components and materials. Vehicle Powertrain Systems: Necessity and selection of clutch, Necessity of gear box and different types of transmission systems- MT, AT, AMT, CVT, DCT, Hybrid Transmission. Overdrive, final drive and differential. | | | |
| Unit II | Mobility Components | (07hrs) | COs Mapped – CO1,CO2 |
| Axles: Types of axles: solid, live, dead, semi-floating, and full-floating Wheels and tyres: Wheel design and construction, Wheel alignment and balancing procedures, type of tyres, construction, materials. Factors influencing tyre performance: tread design, compound, inflation pressure. Steering system :Types of steering systems, Steering kinematics, Active and adaptive steering | | | |

| | | | |
|---|--|-----------------|-----------------------------|
| systems Steer-by-wire technology and drive-by-wire systems, electronic stability control (ESC) | | | |
| Unit III | Suspension and Brake System | (07hrs) | COs Mapped – CO1,CO4 |
| Suspension: Types of Suspension Systems- Independent, Dependent, types of suspension springs, self levelling suspension (active suspension), shock absorbers (hydraulic and air). Brake systems: Drum, disc, mechanical, hydraulic, air brakes, vacuum, power assisted brakes, handbrake, ABS, EBD, Electronic stability control (ESC) and traction control systems (TCS) | | | |
| Unit VI | Automotive Performance & Safety | (07 hrs) | COs Mapped – CO1,CO5 |
| Automotive performance: Performance testing methodologies and standards, Basic principles of vehicle dynamics: traction, stability, and control. Road performance curves, Factors Affecting Vehicle Performance. Automotive safety: Types of active and passive safety, Emerging Technologies in Vehicle Performance and Safety. | | | |
| Unit V | Electrical System and Vehicle Maintenance | (07 hrs) | COs Mapped – CO1,CO3 |
| Batteries : Principles and construction of lead-acid battery, characteristics of battery, rating capacity and efficiency of batteries, various tests on battery condition, charging methods, introduction to lithium batteries. Introduction to Electrical system and accessories. Maintenance: Types of vehicle maintenance, servicing/overhauling of clutch, gear box, propeller shaft, differential, axles, steering system, suspension system, brake system, electrical system. | | | |

| | Course Outcomes | Bloom's Level |
| CO1 | Recognize the importance of CFD in Heat and Fluid flow | 1-Knowledge |
| CO2 | Recognize forced convection heat transfer coefficient over regular bodies like sphere, cylinder. | 2-Understand |
| CO3 | Assessment of drag coefficient in circular pipe under turbulent flow and bent pipe. | 3-Apply |
| CO4 | Pertain how to handling moving boundaries and wall effects in motion of fluid | 3-Apply |
| CO5 | Analyze how to handle power law fluids in CFD. | 4-Analyze |

| List of Laboratory Experiments/Assignments | | |
|---|---|-----------------|
| Sr. No. | Laboratory Experiments/Assignments | COMapped |
| 1 | Turbulent flow in a circular pipe: generating the friction coefficient versus Reynolds number | CO1,CO3 |
| 2 | Flow of a power law non Newtonian fluid over an elliptic cylinder | CO1,CO5 |
| 3 | Natural convection over a sphere. | CO1 |
| 4 | Mixed convection over a sphere. | CO1,CO2 |
| 5 | Forced convection over a sphere. | CO1,CO2 |
| 6 | Forced convection over two cylinders in tandem arrangement. | CO1,CO2 |
| 7 | Calculation of flow and heat transfer in a lid driven cavity. | CO1, |
| 8 | Wall effect on a sphere in a cylindrical tube. | CO1,CO4 |
| Guidelines for Laboratory Conduction | | |

Student should also submit a detailed report for all the above laboratory practicals.

All simulation results should be validated with correlations available.

The student is expected to attach the simulation predictions and the literature results when he presents the record.

Guidelines for Student's Lab Journal

Write-up should include title, aim, setup diagram/layout, working principle, procedure, observations, graphs, calculations-technical and economics and conclusion.

Guidelines for Term work Assessment

Each experiment from lab journal is assessed for thirty marks based on three rubrics.

Rubric R-1 for timely completion, R-2 for understanding and R-3 for presentation/journal writing where each rubric carries ten marks.

| Prerequisite Courses, if any: - Basics of Electrical and Electronics Engineering, Engineering Mathematics, Mechanics, Mechatronics | | | |
| Course Objectives: <ul style="list-style-type: none">Understand the Sensors, actuators, End effectors,Understand Robot Kinematics and Dynamics with simulationUnderstand control laws for simple robotUnderstand robot program for robot application | | | |
| Course Outcomes: On completion of the course, students will be able to– | | | |
| | Course Outcomes | Bloom's Level | |
| CO1 | Demonstrate the Sensors, actuators, End effectors, | 2- Understand | |
| CO2 | Analyze Robot Kinematics and Dynamics with simulation | 3 - Apply | |
| CO3 | Summarize control laws for simple robot | 4 - Analyze | |
| CO4 | Develop robot program for robot application | 5 - Evaluate | |
| COURSE CONTENTS | | | |
| Unit I | Introduction to Automation and Robotics | (6 hrs) | COs Mapped - CO1 |
| Introduction to Automation, Types, Strategies, Automated Flow Lines, Automated Guided Vehicles, Automated Storage and Retrieval Systems, Introduction to CAD/ CAM/ CIM, Industry 4.0 Introduction to Robotics – Laws of Robotics, Robot Anatomy, Classification of Robots, Robots Links and Joints, Degrees of Freedom, Robot Configurations, Work Envelope Robot Performance – Resolution, repeatability, accuracy, dexterity, Compliance, RCC Applications of Robots – in Unmanned systems, Defense, medical, Industries | | | |
| Unit II | Robot Sensors and Vision, End Effectors and actuation systems | (7hrs) | COs Mapped – CO1 |
| Sensors –Touch, Range, Tactile, Acoustic, Light Curtain, Sensor Selection Robot Vision – Components of vision system, image acquisition, Cameras, Image Storage and Image Processing, feature Extraction, Object recognition Robot End Effectors – Grippers - Mechanical, Pneumatic, Hydraulic, Magnetic, Vacuum Grippers; Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers Actuators - Pneumatic Drives, Hydraulic Drives, Mechanical Drives, Electrical Drives - Servo Motors, Stepper Motors, BLDC motor, Micro actuators | | | |
| Unit III | Robot Kinematics and Dynamics | (7hrs) | COs Mapped – CO2 |
| Robot Kinematics – Translation and Rotation representation, Coordinate Transformation, Denavit Hartenberg parameters, Forward and Inverse Kinematics, Jacobian, Singularity and Statics Robot Dynamics – Forward and Inverse Dynamics, Equation of Motion using Euler – Lagrange Formulation and Newton – Euler Formulation, Case study on kinematic and dynamics of Industrial robot | | | |
| Unit IV | Robot Control System | (7hrs) | COs Mapped –CO3 |
| Embedded Systems – microcontroller architecture, Integration of Sensors and Actuators Basics of Control – Open and Closed Loop, Transfer Functions, Control Law Partitioning, PID Control, Linear and Nonlinear control, Force / Position Control, Adaptive control | | | |

| Introduction to Trajectory Planning, Artificial Intelligence in Robotics, Robotic Simulation | | | |
|---|-------------------|--------|------------------|
| Unit V | Robot Programming | (7hrs) | COs Mapped – CO4 |
| Robot Programming – Methods of Robot Programming, Lead through Programming, Motion Interpolation, Robot Language Structure, Programming in VAL II, motion commands, End effector and Sensor Commands, Monitor mode commands, Robot program on palletizing and Depalletizing | | | |

| 2305318 : Financial Management | | | |
| Teaching Scheme: | | Credit Scheme: | Examination Scheme: |
| Theory: 2 Hrs /week | | 02 | Continuous Comprehensive Evaluation: 50 Marks |
| Prerequisite Courses, if any: -Fundamentals of Statistics, Basics of finance | | | |
| Course Objectives | | | |
| 5. To introduce the concepts of economics & finance in industry. | | | |
| 6. To understand cost analysis and pricing | | | |
| 7. To acquire knowledge on basic financial management aspects and develop the skills to analyze financial statements | | | |
| 8. To understand the budgetary process and control. | | | |
| 9. To introduce the entrepreneurial financial aspects. | | | |
| Course Outcomes: On completion of the course, students will be able to– | | | |
| | Course Outcomes | | Bloom’s Level |
| CO1 | UNDERSTAND the business environment, concepts of economics and demand-supply scenario. | | 2-Understand |
| CO2 | UNDERSTAND accounting systems and analyze financial statements using ratio analysis | | 2-Understand |
| CO3 | APPLY the concepts of costing and pricing to evaluate the pricing of mechanical components. | | 3-Apply |
| CO4 | SELECT and PREPARE the appropriate type of budget and understand the controlling aspects of budget | | 3-Apply |
| CO5 | DEMONSTRATE understanding of financing decisions of new ventures and performance | | 4-Analyze |
| COURSE CONTENTS | | | |
| Unit I | Introduction to Economics | (04hrs) | Cos Mapped – CO1 |
| Economics: Significance of Economics, Micro and Macro Economic Concepts, Various terms and Concepts, Importance of National Income, Inflation, Money Supply in Inflation, Factors of Production, Business Cycle, Features and Phases of Business Cycle. Nature and Scope of Business Economics, Role of Business Economist, Multidisciplinary nature of Business Economics | | | |
| Demand and Supply: Elasticity, Types of Elasticity, Law of Demand, Measurement and Significance of Elasticity of Demand, Factors affecting Elasticity of Demand, Elasticity of Demand in decision making, Demand Forecasting: Characteristics of Good Demand Forecasting, Steps in Demand Forecasting | | | |
| Unit II | Costs and Cost Accounting | (05hrs) | Cos Mapped – CO1,CO3 |
| Costs: Standard cost, estimated cost, First cost, Fixed cost, Variable cost, Incremental cost, Differential cost, Sunk and marginal cost, Cost curves, Breakeven point and breakeven chart, Limitations of breakeven chart, Interpretation of breakeven chart, margin of safety, Angle of incidence and multi product break even analysis, Cost Output Decision and Estimation of Cost, Zero Based Costing and numerical | | | |
| Cost Accounting: Objectives of cost accounting, elements of cost: material cost, labor cost, and expenses, | | | |

| | | | |
|---|-------------------------------------|-----------------|-----------------------------|
| allocation of overheads by different methods, Costing based on direct and indirect costs, Overheads apportionment and absorption, Different Models of Depreciation. Numerical on costing | | | |
| Unit III | Financial Accounting | (5hrs) | Cos Mapped – CO1,CO2 |
| Accounting, Cost accounting & Management accounting, Various types of business entities, Accounting principles, postulates & meaning of accounting standards, Accounting cycle, Capital and revenue, Revenue, Expenses, Gains & Losses, Types of accounts & their rules, Journal Entries Create ledger, Preparation of Trial Balance, Finalizations, Preparation of Trading & Profit & Loss account, Understanding of Assets & Liabilities Balance sheet and related concepts – Profit & Loss Statement and related concepts, Financial Ratio Analysis, Cash flow analysis, Funds flow analysis, Comparative financial statements, Analysis & Interpretation of financial statements, Concept of Ratio Analysis, Preparation of Balance sheet (numerical) | | | |
| Unit VI | Budget and Budgetary Control | (05hrs) | Cos Mapped – CO1,CO4 |
| Budgeting and Budgetary Control: Concept of budget, Types and classification of budgets, Advantages and limitations, Methods of budgeting Budgetary Control: objectives, merits and limitations, Budget administration. Functional budgets. Fixed and flexible budgets, Installation of Budgetary Control System, Zero base budgeting, Taxes and Financial Planning, Impact of Taxation and Inflation on Financial Management | | | |
| Unit V | Entrepreneurial Finance | (05 hrs) | Cos Mapped – CO1,CO5 |
| Sources of Funds for Entrepreneurs and Start Ups: Entrepreneurial Finance Vs. Corporate Finance; Traditional Sources of Funds, Early-Stage Sources of Funds- Incubators, Accelerators, Crowd Funding, Business Angels, Mezzanine Funds, Venture Capitals, Private Equity, LBO, Funding Process – Deal Sourcing, Deal Negotiation, Deal Agreement, Term Sheet Investment Decisions for Start Ups: Time Value of Money, Types of Investment Decisions, Capital Budgeting Process – Investment Evaluation, Risk Analysis in Capital Budgeting – Risk Adjusted Discount Rate, Certainty Equivalent, Decision Tree, Sensitivity Analysis, Scenario Analysis Valuation and Measurement of Financial Performance: Pre Money and Post Money Valuation, Factors Influencing Valuation, Valuation Methods, Dilution and Valuation of Equity, Metrics used for Performance Evaluation, Harvesting-Exit Strategies | | | |

| Teaching Scheme: | Credit Scheme: | Examination Scheme: |
| Tutorial: 01 hrs / week Practical: 02 hrs / week | 01 01 | Tutorial : 25 Marks Practical Exam : 25 Marks |
| Prerequisite Courses: - Basics of linear measurement, Physics, Fundamentals of Mechanical Engineering. | | |
| Course Objectives: <ul style="list-style-type: none">To develop essential skills for calibrating and testing instruments.To apply basics of measurement methods through the gathering of data, analysis, and interpretation and expertise in designing limiting gauges.To demonstrate various robotic configurations using industrial robotTo select appropriate hydraulic and pneumatic components by considering specified system requirements, performance criteria, and compatibility with existing infrastructure.To summarize troubleshooting techniques essential for identifying and resolving common issues encountered in fluid power systems | | |
| | | |
| | Course Outcomes | Bloom's Level |
| CO1 | Selection of measurement methods and standards, carryout data collection and its analysis. | 2-Understanding |
| CO2 | Determine limits, fits, tolerances, geometric tolerances and Design of Gauges. | 3- Apply |
| CO3 | Demonstrate of various robotic configurations using industrial robot | 3- Apply |
| CO4 | Construct Industrial circuits using suitable hydraulic and pneumatic components | 3- Apply |
| CO5 | Design an industrial fluid power system | 5 - Evaluate |
| COURSE CONTENTS | | |
| The student shall complete the following activity as a Term Work, <ol style="list-style-type: none">Demonstrate and compute linear and angular measurements employing tools such as Vernier Caliper, Screw Gauge, Dial Gauge, Height Gauge, Bevel Protector, etc. Analyze measurement errors using OER software, Minitab, or Excel sheets.Determine Parameters of screw thread using floating carriage micrometer.Determine the geometry and dimensions of a given composite object or a single-point tool using an Optical Projector or Tool Maker's Microscope. Evaluate and distinguish its practical utility in real-life applications.Measurement of the any one characteristics from the following using any suitable measurement system,<ol style="list-style-type: none">Surface roughness | | |

- b. Gear tooth Parameter
- c. Verification of composite geometry.
- 5. Limit Gauges: Concepts, uses and applications of Go –No Go Gauges, Taylor’s principle and Design of gauges (Numerical and student activity)
- 6. Demonstration of various robotic configurations using industrial robot
- 7. Demonstrate industrial circuits on Hydraulic trainers
- 8. Demonstrate industrial circuits on Pneumatic trainers
- 9. Design an industrial fluid power system to address a specified problem by selecting components from manufacturer catalogs.
- 10. Exploring Industrial Automation Systems: Site Visit.

Important Note:

Industry visit for advanced in measurement and automation to provide exposure to students.

Guidelines for Teamwork Assessment

Continuous Assessment Policy

(Term work marks of 25 will be awarded based on the following policy)

Each laboratory assignment will be assessed for 30 Marks according to the following rubrics:
R1- Timely completion of assignments (10 Marks)
R2- Understanding of assignment (10 Marks)
R3 – Presentation/Clarity of journal writing (10 Marks)
For all 10 Experiments, total marks of 300 will be converted into 25 Marks.

| Description | Weightage | Evaluation criteria |
|---|-----------|---|
| R1-Timely completion of assignments | 10 Marks | Each experiment/assignment will get 10 marks for timely submission. Late submission will be valued as 5 in totality. Fail to submit will be valued as 0 in totality |
| R2- Understanding of assignment. | 10 Marks | Understanding of assignments is based on oral questions based on assignment. |
| R3 – Presentation/Clarity of Drawing Sheets | 10 Marks | Completed sheet with proper dimensioning, line work carries 10 marks. |

| T. Y. B. Tech Pattern 2023 Semester: VI (Mechanical Engineering 2305320 : Seminar | | |
|--|---|---------------------|
| Teaching Scheme: | Credit Scheme: | Examination Scheme: |
| Practical: 2 hrs./week | 1 | TermWork : 50Marks |
| Prerequisite Courses: -- | | |
| Course Objectives: <ul style="list-style-type: none">• Apply problem-solving skills to real-world scenarios related to their specialization.• Analyze the technical and practical challenges within their course specialization.• Evaluate the implications of these challenges on industry practices and innovations.• Demonstrate the ability to describe, interpret and analyze technical issues and develop competence in presenting | | |
| Course Outcomes: With this seminar report and presentation, the student is expected to learn/achieve the following: | | |
| | Course Outcomes | |
| 1 | Applying problem-solving techniques to real-world scenarios, demonstrating adaptability and creativity in finding effective solutions. | |
| 2 | Illustrate technical and practical issues relevant to their specialization. | |
| 3 | Comparing the potential impact of these challenges on various sectors or segments within the industry. | |
| 4 | Demonstrate enhanced soft skills and effective presentation. | |

Course Overview:

This course is designed to enhance the intellectual and professional development of third-year mechanical engineering students by providing them with an opportunity to explore and present on advanced topics relevant to the field. This seminar aims to foster critical thinking, research skills, and effective communication abilities among the students.

Selection of Seminar Topic: (Week 1)

Choose topics that align with current trends, emerging technologies, and challenges in the field of mechanical engineering.

Encourage diversity in topic selection to cover a broad spectrum of sub-disciplines within mechanical engineering, such as thermodynamics, materials science, manufacturing, robotics, fluid mechanics, and sustainable design.

Literature Survey: (Week 2 to Week 4)

**K.K.Wagh Institute of Engineering Education and Research, Nashik
(Autonomous from Academic Year 2022-23)**

Allocate sufficient time for students to conduct in-depth research on their chosen seminar topic.

Encourage the use of reputable academic sources, journals, and research papers for information gathering.

Emphasize the importance of critical analysis and synthesis of information to form well-supported arguments.

Guidance for the Presentation: (Week 5)

Provide guidance on effective presentation techniques, including clear slides, proper use of visual aids, and engaging delivery.

Encourage students to practice their presentations to ensure they adhere to time limits and effectively convey their message.

Highlight the importance of maintaining eye contact, using confident body language, and responding to audience questions with clarity.

Stage I Presentation: (Week 6)

Follow the guidelines for the presentation

Stage I presentation slides should include introduction, literature review and concept.

Stage I presentation to be delivered to the seminar guide.

Report Preparation: (Week 7 to 9)

The students should get draft copy of the report checked from the allotted seminar guide.

Students are expected to maintain a high standard of originality, with a permissible similarity threshold limited to 10%.

Stage II Presentation: (Week 10)

Stage II presentation slides should be as per format and structure provided.

Stage II presentation to be delivered in front of the internal panel.

Report & PPT Editing: (Week 11 to 12)

Report and PPT should be modified as per the suggestions/corrections given by the internal panel.

Final Presentation:

The final presentation/viva will be assessed by a committee including an expert (preferably from industry with minimum 5 years' experience) and an internal panel. The internal panel will consist of the seminar guide and two subject experts, approved by the HOD and the principal of the institute.

Format and Structure for Seminar Report Writing:

Introduction: Provide a clear and concise introduction to the chosen topic, highlighting its relevance and significance in the field of mechanical engineering.

**K.K.Wagh Institute of Engineering Education and Research, Nashik
(Autonomous from Academic Year 2022-23)**

Literature Review: Summarize key findings from relevant literature and discuss the existing knowledge base on the selected topic.

Methodology (if applicable): Outline any experimental methods, simulations, or data analysis techniques employed in the research.

Results and Discussion: Present and analyze the findings, addressing any challenges or limitations encountered during the research process.

Conclusions: Summarize the key takeaways and contributions of the seminar, along with potential avenues for future research.

Q&A Session: Allow time for questions and discussions, promoting interaction and engagement with the audience.
