| <b>Prerequisite:</b> Knowledge of process calculations, mass transfer operations, and fluid mechanics aids in analyzing and optimizing energy usage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                      |                                                                                                                                                       |
| <b>Course Objectives:</b> <ol style="list-style-type: none"> <li>1. To introduce the global and national energy scenario and provide foundational knowledge of energy policies, pricing, environmental impacts, and energy auditing practices.</li> <li>2. To equip students with essential tools and techniques for conducting energy audits and managing industrial energy consumption effectively across thermal and electrical systems.</li> <li>3. To develop analytical skills for evaluating energy performance, interpreting audit data, and preparing structured energy audit reports with practical recommendations</li> </ol> |                                                                                                      |                                                                                                                                                       |
| <b>Course Outcomes:</b> On completion of the course, students will be able to–                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                      |                                                                                                                                                       |

| <b>Course Objectives:</b> <ol style="list-style-type: none"> <li>1. To equip students with skills to define research problems, conduct systematic literature reviews, and manage references ethically.</li> <li>2. To equip students with skills of appropriate data collection methods, sampling techniques, and tools for effective research in various disciplines.</li> <li>3. To analyze characterization data for material and process evaluation.</li> <li>4. To familiarize students with well-structured research reports with proper literature review, interpretation, and referencing.</li> <li>5. To explore emerging trends, interdisciplinary opportunities, and industry collaborations in chemical engineering research.</li> </ol> |                                                                                                                        |                                                                                                                                       |
| <b>Course Outcomes:</b> On completion of the course, students will be able to–                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                        |                                                                                                                                       |

| <b>Course Objectives:</b> <ol style="list-style-type: none"><li>1. To conduct systematic experimental work on the defined research problem using appropriate chemical engineering methodologies and safety protocols</li><li>2. To prepare a comprehensive project report with standardized sections (Abstract, Introduction, Experimental, Results, etc.) following prescribed formatting and anti-plagiarism guidelines.</li><li>3. To analyze experimental data rigorously, interpret results critically, and correlate findings with theoretical principles.</li><li>4. To develop a feasible plant layout and perform cost analysis, demonstrating practical scalability of the project.</li><li>5. To present research progress effectively through reviews, defend outcomes orally, and articulate technical knowledge via structured presentations.</li></ol> |                                                                                                                                                         |                                                                                   |
| <b>Course Outcomes:</b> On completion of the course, learner will be able to:-                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                         |                                                                                   |

| <b>Guidelines for Report Preparation:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                         |                                                                                   |
| During the second term, the students are required to: <ol style="list-style-type: none"><li>1. Carry out detailed experimental work on the previously defined (Phase I) research problem.</li><li>2. Write a Project Report, which should be broadly divided into the following sections:<ul style="list-style-type: none"><li>• Abstract</li><li>• Introduction</li><li>• Experimental</li><li>• Results and Discussion</li><li>• Conclusion</li><li>• References</li></ul></li></ol>                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                         |                                                                                   |
| <b>Project Report Format:</b> <ul style="list-style-type: none"><li>• Font: Times New Roman</li><li>• Font Size: 12 (Text), 14 (Headings)</li><li>• Spacing: 1.5</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                         |                                                                                   |

**K. K. Wagh Institute of Engineering Education and Research, Nashik**  
(Autonomous from Academic Year 2022-23)

- Paper Size: A4 (typed on one side only)
- Include proportionate diagrams, figures, graphs, photographs, tables, etc.

**Referencing Style:**

Students must follow IEEE reference format. Examples for various types of documents are provided below:

**1. Book**

**Format:**

[Ref number] Author's initials. Author's Surname, *Book Title*, edition (if not first). Place of publication: Publisher, Year.

**Example:**

[1] I.A. Glover and P.M. Grant, *Digital Communications*, 3rd ed. Harlow: Prentice Hall, 2009.

**2. Book Chapter**

**Format:**

[Ref number] Author's initials. Author's Surname, "Title of chapter in book," in *Book Title*, edition (if not first), Editor's initials. Editor's Surname, Ed. Place of publication: Publisher, Year, pp. xxx-xxx.

**Example:**

[2] C. W. Li and G. J. Wang, "MEMS manufacturing techniques for tissue scaffolding devices," in *MEMS for Biomedical Applications*, S. Bhansali and A. Vasudev, Eds. Cambridge: Woodhead, 2012, pp. 192-217.

**3. Electronic Book**

**Format:**

[Ref number] Author's initials. Author's Surname. (Year, Month Day). *Book Title* (edition) [Type of medium]. Available: URL

**Example:**

[3] W. Zeng, H. Yu, C. Lin. (2013, Dec 19). *Multimedia Security Technologies for Digital Rights Management* [Online]. Available: <http://goo.gl/xQ6doi>

**4. Journal Article**

**Format:**

[Ref number] Author's initials. Author's Surname, "Title of article," *Journal Title Abbreviated*, vol. number, issue number, pages, Abbrev. Month Year.

**Example:**

[4] F. Yan et al., "Study on the interaction mechanism between laser and rock during perforation," *Optics and Laser Technology*, vol. 54, pp. 303-308, Dec 2013.

**5. E-Journal Article**

**Example:**

[5] M. Semilof. (1996, July). "Driving commerce to the web-corporate intranets and the internet: lines blur." *Communication Week* [Online], vol. 6, issue 19. Available: <http://www.techweb.com/se/directlinkcgi?CWK19960715S0005>

**6. Conference Papers**

**Example:**

[6] S. Adachi et al., "Intense vacuum-ultraviolet single-order harmonic pulse by a deep-ultraviolet driving laser," in *Conf. Lasers and Electro-Optics*, San Jose, CA, 2012, pp. 2118-2120.

**7. Reports**

**K. K. Wagh Institute of Engineering Education and Research, Nashik**  
(Autonomous from Academic Year 2022-23)

**Example:**

[7] P. Diamant and W. L. Luptakin, "V-line surface-wave radiation and scanning," Dept. Elect. Eng., Columbia Univ., New York, Sci Rep. 85, 1991.

**8. Patents**

**Example:**

[8] J. P. Wilkinson, "Nonlinear resonant circuit devices," U.S. Patent 3 624 125, July 16, 1990.

**9. Standards**

**Example:**

[9] *Shunt Power Capacitors*, IEEE Standard 18-2012, 2013.

**10. Thesis/Dissertations**

**Example:**

[10] J. O. Williams, "Narrow-band analyser," Ph.D. dissertation, Dept. Elect. Eng., Harvard Univ., Cambridge, MA, 1993.

**11. Datasheets**

**Example:**

[11] Texas Instruments, "High speed CMOS logic analog multiplexers/demultiplexers," 74HC4051 datasheet, Nov. 1997 [Revised Sept. 2002].

**12. Online Documents & Websites**

**Example:**

[12] BBC News. (2013, Nov. 11). *Microwave signals turned into electrical power* [Online]. Available: <http://www.bbc.co.uk/news/technology-24897584>

**Guidelines for Project Evaluation and Assessment:**

1. **Progress Presentation:** Each student must present their project work in two review presentations (10 minutes, 10-12 slides per presentation).
2. **Oral Examination:** Each student will face an oral exam for 50 marks, based on the project topic and related areas.
3. **Term Work:** Total 100 marks, evaluated based on work performed, progress made, depth of work, and overall quality.

**Submission Requirements**

The final Project Report must include:

- Cover Page (Project Title, Student Name(s), Guide Name, Exam Seat Number, Year)
- Certificate from Guide
- Certificate from Industry (if applicable)
- Index
- Detailed Project Report (including: Abstract, Introduction, Experimental, Results and Discussion, Conclusion and References)

**Note:** Students are encouraged to present their work at conferences, seminars, or competitions in consultation with their guide.

| <ol style="list-style-type: none"><li>1. Interested students have to submit the Application Form (as per the prescribed format) to department T&amp;P officer.</li><li>2. Internship under following two categories are considered:<br/><b>Case 1:</b> Where a student is offered an internship through the college internship cell.<br/><b>Case 2:</b> Where students can avail the internship with his/ her efforts in an industry / start up or research institute.</li><li>3. In case of an internship offered through the college selection process, (Case 1) the student is eligible for only one offer and cannot appear for further process once selected.</li><li>4. Only one application will be accepted from one student (in either Case 1 or 2) in the prescribed format available with the Internship cell.</li><li>5. The applications will be scrutinized by the internship approval committee at college / department level for its merit. The decision of the committee will be final and further grievances will not be entertained.</li></ol> |                                                                                                                                                                    |                                                                                           |

**K. K. Wagh Institute of Engineering Education and Research, Nashik**  
**(Autonomous from Academic Year 2022-23)**

6. The duration of internship will be immediately commenced after completion of semester VII examinations. It will end on the date specified as per the academic calendar.
7. Students can join an internship only after getting an approval from the Internship-committee. An undertaking prescribed by the college signed by the student and parent needs to be submitted.
8. The college will assign a mentor for each student who will monitor the students' progress throughout the duration of the internship. The students are expected to be in contact with the mentor on a regular basis.
9. Students should maintain daily diary, attendance sheet during internship.
10. In case of any expenses towards internship within or outside Nashik due to traveling, stay etc. should be borne by the student undertaking the internship.
11. In case any student attempts to join an internship bypassing college procedure, it will not be considered for credit completion of semester VIII and hence for award of the B. Tech degree.
12. After completion of the internship students should submit duly signed Daily diary, Attendance sheet, Internship report, Industry evaluation/feedback, and internship certificate within 7 days from the date of completion to the respective internship mentor.
